

Introducing... The Parabola!

The graph of a quadratic relation is called a parabola. The parabola has some important features:

Everything you ever wanted to know about parabolas...

- Parabolas can open up or down.
- The zero of a parabola is where the graph crosses the x -axis. There can be zero, one, or two of these (depending on how many places it crosses the x -axis).
- "Zeroes" can also be called " x -intercepts" or "roots"
- The axis of symmetry divides the parabola into two equal halves. It is a vertical line right up the middle in the form " $x = \underline{\hspace{1cm}}$ ".
- The vertex of a parabola is the point where the parabola changes direction. It is the point where the parabola is at its maximum or minimum value. This is also the point where the parabola and the axis of symmetry meet.
- The optimal value is the value of the y co-ordinate of the vertex.
- The y-intercept of a parabola is where the graph crosses the y -axis.
