Kelsey, 2011-03-21 In this book experts in the field describe best practices based on their experiences in corporate libraries worldwide With information driving today's global economy corporate librarians must become even more proactive in their daily assignments Best Practices for Corporate Libraries will help them do just that through a series of papers that offer an international array of opinion and practice methods This book showcases current practices in corporate library functions and suggests best practices for current librarians It also examines some of the changes in librarianship that have arisen from changes in how information is provided and how corporations are now organized Topics covered include library service functions return on investment measurements and evaluation collaboration communication and outreach in corporations managing changes in the corporation and in the library and legal issues such as intellectual property concerns Drawing from the experience of 25 contributors the book includes chapters covering corporate libraries in the United States United Kingdom India Barbados and Nigeria

B2B Executive Playbook Sean Geehan, 2011-08-09 The first book completely focused on successfully running B2B which is very different from B2C The fate of a B2B lies in the hands of a few individuals so what ultimately determines if a company thrives or even survives is how these key relationships are targeted structured and managed Over 30 percent of all B2B product development marketing and other discretionary dollars are wasted When the realities of B2B marketplace are not integrated into a company's SOP it is more likely that the company is wasting money as well as the employees time and efforts If the budget and plans aren't structured for B2B specifically they won't move the meter But there is good news there is a corresponding equal amount of potential revenue growth and prosperity The leading B2B companies dramatically build their top and bottom lines when leaders realize that success undeniably and unquestionably resides with how they engage with their customers and how that will drive their internal alignment and operations What is it that they are doing differently than their competition and others in their industry that drive revenue growth deliver predictable earnings retain and grow customers and develop new offerings that customers will not only buy but for which they will pay premiums

Consortium Approach to Resource Sharing in an E-Environment Y.M. Patil, 2014-01-01 The book deals with resource sharing through consortium approach During 1990s due to journals crisis emergence of scholarly electronic publishing shift in print form to electronic version escalation of costs of journals all have compelled library professionals to move towards a strategic relationship in forming consortium by taking advantage of emerging new technologies To begin with resource sharing is briefed covering library cooperation Emergence of electronic publishing has facilitated subscription to e journals access and delivery mechanisms With proliferation of e resources constraints of copyright laws and licensing library consortia have emerged with a sole aim of moving from organizational self sufficiency to a collaborative survival mode There are several consortia types models at organization level types of libraries participating

and parent organizations depending upon coverage of subject areas and purpose of coming together The very purpose of consortia is to deal with pricing and licensing by means of negotiations and strike a deal suitable for stakeholders With growth of different consortia in a country or region it is desirable to coordinate all such efforts and look for National Consortium and go for National Site Licensing Publishers were also providing bundled or big deal offers which could solve journals crisis but not budget constraints as faced by libraries With experience gained in forming consortia library professionals also gained enough skills for negotiations which bring about win win situation to all stakeholders In order to implement consortia activities it is required to have minimum infrastructure including access to Internet e mail service IP addresses networking archiving etc Also the consortia should have some standards protocols such as COUNTER SUSHI and SERU to run activities effectively It is also important to look into archiving needs of consortia on a long term basis as publishers perpetual access suffer from trust factors as a result of which some international agencies have emerged It is also worth looking for consortia migration and merger in order to make better use of available information and enhance consortia interests on a much larger scales There have been concerted efforts in India in forming consortia and a brief of each consortium is given followed by experiences gained which created confidence and strength to run consortia on a sustainable basis

Algorithmic Foundations of Robotics VI Michael Erdmann, David Hsu, Mark Overmars, A. Frank van der Stappen, 2005-06-23. Robot algorithms are abstractions of computational processes that control or reason about motion and perception in the physical world. Because actions in the physical world are subject to physical laws and geometric constraints, the design and analysis of robot algorithms raise a unique combination of questions in control theory, computational and differential geometry and computer science. Algorithms serve as a unifying theme in the multi disciplinary field of robotics. This volume consists of selected contributions to the sixth Workshop on the Algorithmic Foundations of Robotics. This is a highly competitive meeting of experts in the field of algorithmic issues related to robotics and automation.

Semantic Labeling of Places with Mobile Robots Óscar Martínez Mozo, 2010-01-10. During the last years there has been an increasing interest in the area of service robots. Under this category we find robots working in tasks such as elderly care, guiding office and domestic assistance, inspection and many more. Service robots usually work in indoor environments designed for humans, with offices and houses being some of the most typical examples. These environments are typically divided into places with different functionalities like corridors, rooms or doorways. The ability to learn such semantic categories from sensor data enables a mobile robot to extend its representation of the environment and to improve its capabilities. As an example, natural language terms like corridor or room can be used to indicate the position of the robot in a more intuitive way when communicating with humans. This book presents several approaches to enable a mobile robot to categorize places in indoor environments. The categories are indicated by terms which represent the different regions in these environments. The objective of this work is to enable mobile robots to perceive the spatial divisions in indoor environments in a similar way as people do. This is an interesting step forward to the problem of moving the perception of robots closer to the perception of humans. Many approaches introduced in this book come from the area of pattern recognition and classification. The applied methods have been adapted to solve the specific problem of place recognition. In this regard, this work is a useful reference to students and researchers who want to

introduce classification techniques to help solve similar problems in mobile robotics *Medical Library Association Oral History Committee Interview with Naomi Broering* Naomi C.
