

Urinary System

Anatomy & Physiology of Urinary System

Overview

- As the body breaks down protein for energy, nitrogenous waste- urea, ammonia, and creatinine- is produced.
- The urinary system 1) forms urine, 2) **balances fluid and electrolytes**, 3) balances pH, 4) excretes waste products, 5) **regulates blood pressure**, 6) creates red blood cells (**erythropoiesis**) , and 7) activates vitamin D , elevating calcium.
- Vitamin D helps absorption of calcium. (**Calciferol**)

Overview

- Consists of two kidneys, two ureters, the bladder, and urethra.
- Kidneys:** removes waste, excess water, and electrolytes from the blood and concentrate them in the urine.
- Bladder:** collects and stores urine.
- Urethra:** transports urine from bladder to outside of the body.

Kidneys

- Lies parietal peritoneum, below diaphragm, each side of vertebral column; dark red, bean-shaped, 4-5 inch long, 1 inch thick; **right kidney lies slightly lower than left**; surrounded by adipose tissue; renal artery, renal vein, and ureter exit the kidney at the hilum; adrenal glands sit atop each kidney.

Gross Anatomic Structure

- The strong outer layer of connective tissue is the renal capsule. Beneath it is the renal cortex, containing 1.25 million renal tubules. **Next is the medulla (darker color)**. The medulla contains triangular pyramids; the narrow points are the papillae, which empties urine into the calyces. The calyces are cuplike extensions in renal pelvis. The renal pelvis is the upper end of the ureter.

Microscopic Structure (Nephron)

- Each kidney contains more than 1 million nephrons (a microscopic funnel with a long stem and two convoluted sections. **It filters the blood and processes urine by: 1) controlling body fluid levels by selectively removing or retaining water, 2) helps regulate pH of the blood, 3) removes toxic waste from the blood. It filters the entire blood supply approximately 60 times per day.**

Microscopic Structure (Nephron)

- The renal arteries enter each kidney at the hilum. Renal arteries continue branching inside the kidney until blood is delivered to the glomerulus by an afferent arteriole. The filtered blood leaves the

Study Guide and Workbook, an Interactive Approach for Starr and McMillan's Human Biology, Third Edition Jane B. Taylor, John D. Jackson, 1999 Asks the student to write all answers in this study guide workbook. This workbook is interactive because it requires students to do things instead of just read more material. All questions are arranged by chapter modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple choice questions, tables to be filled in, art to be labeled, true/false questions requiring students to write the correct answer if the statement is false, thought provoking conceptual questions, boldfaced terms requiring a written definition, list of objectives in fill in the blank format and other types of questions.

Principles of Human Anatomy Gerard J. Tortora, 1995 Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features including questions with figures, colour anatomy photographs, improved readability, phonetic pronunciations and more exhibits.

PET and PET/CT Study Guide Andrzej Moniuszko, Adam Sciuk, 2012-10-06 The PET and PET/CT Study Guide presents a comprehensive review of nuclear medicine principles and concepts necessary for passing PET specialty board examinations. The practice questions and content are similar to those found on the Nuclear Medicine Technology Certification Board (NMTCB) exam, allowing test takers to maximize their chances of success. The book is organized by test sections of increasing difficulty with over 650 multiple choice questions covering all areas of positron emission tomography including radiation safety, radionuclides, instrumentation and quality control, patient care and diagnostic and therapeutic procedures. Detailed answers and explanations to the practice questions follow. Supplementary appendices include common formulas, numbers and abbreviations along with a glossary of terms for easy access by readers. The PET and PET/CT Study
