Syntax Tree Diagram Maker:

Aspects of the Theory of Syntax Noam Chomsky, 1969-03-15 Chomsky proposes a reformulation of the theory of transformational generative grammar that takes recent developments in the descriptive analysis of particular languages into account Beginning in the mid fifties and emanating largely from MIT an approach was developed to linguistic theory and to the study of the structure of particular languages that diverges in many respects from modern linguistics Although this approach is connected to the traditional study of languages it differs enough in its specific conclusions about the structure and in its specific conclusions about the structure of language to warrant a name generative grammar Various deficiencies have been discovered in the first attempts to formulate a theory of transformational generative grammar and in the descriptive analysis of particular languages that motivated these formulations At the same time it has become apparent that these formulations can be extended and deepened The major purpose of this book is to review these developments and to propose a reformulation of the theory of transformational generative grammar that takes them into account The emphasis in this study is syntax semantic and phonological aspects of the language structure are discussed only insofar as they bear on syntactic theory

Sentence Generation Yuko Sakai, 2017-04-27 Many define the language in various phrases with various modifiers as a tool of communication However not all the language is communicated and the language is generated before the communication We have no words to communicate without thinking whose concrete act is to choose the words Therefore cognition and language have the same origin We the human beings have language to recognize and dominate the world including our own mind This is the reason why we have reason and language Language is not merely a tool of communication but it is indispensable to have reason and to be a Homo sapiens The reason is based on the outside world composed of space time We perceive the outside world and recognize it by naming or classifying in our each vocabulary Accordingly a linguistic theory which explains how and why the sentences are should start with the cognition The method is opposite to that of Aristotle s tradition which begins in the form and the contents are interpreted from the form based on the view that language is a tool of communication regarding only the communicated words as language The same view is also found in F de Saussure who regarded language as a given and socially approved system of signs Language is not a system of signs but what we generate just in the next moment If we shut up language does not exist The system or grammar may change with our usage of words moment by moment thus language continues to change as long as it is spoken Consequently this work finds the DEEP and UNIVERSAL STRUCTURE of sentence in the structure of the four dimensional cognition First we deduce what structure is necessary to express the four dimensional cognition Secondly we see how we generate the surface structures in five languages English Spanish Chinese Japanese and Ainu We define each word in syntactic tree diagrams just like chemical formulas to verify the deep structure in the surface structure
