A Woman's Place Shirley Morahan, 1981-06-30 A truly liberated rhetoric and reader has at last become available to courses in composition with the publication of *A Woman's Place*. This unique textbook explores the notion of writing as self definition and as a consequence the relationship between gender and writing. Convinced that writing is a meaningful process performed with commitment Dr Morahan has created a course that simultaneously sharpens writing and thinking skills and contributes to the consciousness raising of women and men in today's world. Her pedagogy for liberation creates a student centered classroom in which a spirit of collaboration replaces one of competition by means of peer editing tutorial approaches and small group activities. The literary passages of *A Woman's Place* are both stylistically and thematically tied in with the lessons directly. At the same time they function as a compact women's studies course. Research and writing are organized around a cluster of shared themes: problems that all students are addressing in their lives: power vs powerlessness, passivity vs action, identity oppression vs freedom and the nurturance of creativity. Taken from the works of professional writers including such well known individuals as Adrienne Rich, Tillie Olsen, Joan Didion, Virginia Woolf, Margaret Mead, Mary Wollstonecraft, Jonathan Swift and Sylvia Plath, they are often accompanied by short excerpts from student essays. Useful bibliographical notes suggest further readings.

The Realms of Rhetoric Joseph Petraglia, Deepika Bahri, 2003-10-09 The teaching of rhetoric of how to think together and talk together and read and write together is the most important of all vocations and this book is a step toward uniting those of us who under whatever disciplinary label see it that way. From the Foreword by Wayne C Booth

Expertise in Second Language Writing Instruction Alan Hirvela, Diane D. Belcher, 2024-11-25 Despite growing interest in L2 writing teachers, there is a dearth of published works that specifically delve into the nuances of the development of L2 writing teacher expertise. Informed by relevant foundational theory and empirical research, this book addresses this crucial gap in the understanding of expertise in L2 writing instruction. This book offers a holistic analysis of L2 writing instruction, serving as a valuable resource for those involved in the development of L2 writing teacher educators as well as novice teachers striving to hone their skills in teaching L2 writing. It draws from a wide array of international perspectives on the conceptualization of L2 writing teacher expertise and research in this domain. Significantly, it is the first comprehensive work that places expertise in L2 writing instruction at the forefront. It will interest scholars in the disciplines of foreign and second language education as well as postgraduate students and aspiring teachers.

Theory and Practice of Model Transformations Antonio Vallecillo, Jeff Gray, Alfonso Pierantonio, 2008-07-01 Models have become essential for dealing with

the numerous aspects involved in developing and maintaining complex IT systems Models allow capturing of the relevant aspects of a system from a given perspective and at a precise level of abstraction In addition to models the transformations between them are other key elements in model driven engineering Model transformations allow the definition and implementation of the operations on models and also provide a chain that enables the automated development of a system from its corresponding models Furthermore model transformations may be realized using models and are therefore an integral part of any model driven approach There are already several proposals for model transformation specification implementation and execution which are beginning to be used by modeling practitioners However model transformations need specialized support in several aspects in order to realize their full potential The problem goes beyond having specific languages to represent model transformations we also need to understand their foundations such as the key concepts and operators supporting those languages their semantics and their structuring mechanisms and properties e.g modularity composability and parametrization In addition model transformations can be stored in repositories as reusable assets where they can be managed discovered and reused There is also a need to chain and combine model transformations in order to produce new and more powerful transformations and to be able to implement new operations on models Finally model transformations need methodology support i.e they need to be integrated into software development methodologies supported by appropriate tools and environments These issues and concerns define the focus of these proceedings
