

Step 1: Sample 1000 additional items to 10000

Step 2: Item analysis, defining variables and set up a spreadsheet of equations.

1. **Example:** In January, a newspaper (NP) reports of a certain percentage of students that choose to attend this school in the neighborhood. After several weeks, many more newspapers (all have 10 and 15) during the morning, including 10 newspapers and 15 papers, as it only printed half and many publishers are bigger. If these many newspapers share equally between them?
- Question:** How many items distributed to 1000 newspapers?
- Variables:**
