demonstration papers 4 industrial papers 8 demo papers and the abstract of 1 panel discussion were carefully reviewed and selected from a total of 225 submissions The topics covered are social network social network and privacy data mining probability and uncertainty stream processing graph XML XML and graph similarity searching and digital preservation spatial queries query processing as well as indexing and high performance **HWM**, 2005-10 Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews *Handbook on Theoretical and Algorithmic Aspects of Sensor, Ad Hoc Wireless, and Peer-to-Peer Networks* Jie Wu, 2005-08-08 The availability of cheaper faster and more reliable electronic components has stimulated important advances in computing and communication technologies Theoretical and algorithmic approaches that address key issues in sensor networks ad hoc wireless networks and peer to peer networks play a central role in the development of emerging network paradigms Filling the need for a comprehensive reference on recent developments *Handbook on Theoretical and Algorithmic Aspects of Sensor Ad Hoc Wireless and Peer to Peer Networks* explores two questions What are the central technical issues in these SAP networks What are the possible solutions tools available to address these issues The editor brings together information from different research disciplines to initiate a comprehensive technical discussion on theoretical and algorithmic approaches to three related fields sensor networks ad hoc wireless networks and peer to peer networks With chapters written by authorities from Motorola Bell Lab and Honeywell the book examines the theoretical and algorithmic aspects of recent developments and highlights future research challenges The book's coverage includes theoretical and algorithmic methods and tools such as optimization computational geometry graph theory and combinatorics Although many books have emerged recently in this area none of them address all three fields in terms of common issues **Data Dissemination in Wireless Computing Environments** Kian-Lee Tan, Beng Chin Ooi, 2005-12-08 In our increasingly mobile world the ability to access information on demand at any time and place can satisfy people's information needs as well as confer on them a competitive advantage The emergence of battery operated low cost and portable computers such as palmtops and PDAs coupled with the availability and exploitation of wireless networks have made possible the potential for ubiquitous computing Through the wireless networks portable equipments will become an integrated part of existing distributed computing environments and mobile users can have access to data stored at information servers located at the static portion of the network even while they are on the move Traditionally information is retrieved following a request response model However this model is no longer adequate in a wireless computing environment First the wireless channel is unreliable and the bandwidth is low compared to the wired counterpart Second the environment is essentially asymmetric with a large number of mobile users accessing a small number of servers Third battery operated portable devices can typically operate only for a short time because of the short battery lifespan Thus clients are expected to be disconnected most of the time To overcome these limitations there has been a proliferation of research efforts on designing data delivery mechanisms to support wireless computing more effectively Data

Dissemination in Wireless Computing Environments focuses on such mechanisms The purpose is to provide a thorough and comprehensive review of recent advances on energy efficient data delivery protocols efficient wireless channel bandwidth utilization reliable broadcasting and cache invalidation strategies for clients with long disconnection time Besides surveying existing methods this book also compares and evaluates some of the more promising schemes
