Tajima Embroidery Machine Manual:

100 Pioneers in Efficient Resource Management Mario Schmidt, Hannes Spieth, Christian Haubach, Christian Kühne, 2018-12-04 The book presents about 100 current examples of how energy and materials can be saved in manufacturing companies They serve to show which measures can be used in modern companies to exploit the potential for resource efficiency The book is aimed at practitioners in companies and consulting firms but is also suitable for the university sector as a practical introduction to the topic of resource efficiency The materials used account for almost 43 percent of the costs of an average industrial company in Germany Personnel costs on the other hand are only 22 percent while energy costs are as low as 2 percent If a company wants to save costs above all it must consider the use of materials and produce in a resource efficient manner This simultaneously relieves the environment and reduces dependence on scarce raw materials The implementation of resource efficiency is not easy There are indeed numerous starting points in production often in process innovations or in product development However only a few companies publish their measures and savings potentials In practice this means that there are often no learning examples in practice but some of them are explicitly listed in this work As you can see resource efficiency in production and products can also be seen as a success factor for many companies In the project 100 Pioneers in Efficient Resource Management committed companies from Baden Württemberg are showing their solutions The project was carried out by a competent team from the Pforzheim University and the State Agency for Environmental Technology Leading trade associations in Baden Württemberg have supported it
