Wu, 2012-12-06 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT

surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT are utilized to increase efficiency. Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole. I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering. The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation, manufacturing systems modelling and evaluation and the structured design of manufacturing systems. One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved. I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted.

System Dynamics Ernest Doebelin, 1998-02-10 Addressing topics from system elements and simple first and second order systems to complex lumped and distributed parameter models of practical machines and processes, this work details the utility of systems dynamics for the analysis and design of mechanical, fluid, thermal and mixed engineering systems. It emphasizes digital simulation and integrates frequency response methods throughout. College or university bookshops may order five or more copies at a special student price available on request.

Model Validation for Power System Frequency Analysis Hossein Seifi, Hamed Delkhosh, 2018-10-16 This book examines the role of model validation of power system planning and operation to optimize its performance in terms of frequency control. It presents the detailed model validation for the Iranian Power Grid system where the frequency performance was analysed and improved using existing and new standard models to identify the influencing parameters. Although the model validation was employed for a specific practical large scale system, the framework, concepts, methods and formulations can be used for any type of power system. As such, this book describing a generalized framework for model validation with a real case study is useful for both power industry experts and academia.
