Principles of Adaptive Filters and Self-learning Systems Anthony Zaknich, 2005-08-19 The topics of control engineering and signal processing continue to flourish and develop In common with general scientific investigation new ideas concepts and interpretations emerge quite spontaneously and these are then discussed used discarded or subsumed into the prevailing subject paradigm Sometimes these innovative concepts coalesce into a new sub discipline within the broad subject tapestry of control and signal processing This preliminary battle between old and new usually takes place at conferences through the Internet and in the journals of the discipline After a little more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur A new concept in control and signal processing is known to have arrived when sufficient material has evolved for the topic to be taught as a specialised tutorial workshop or as a course to undergraduate graduate or industrial engineers Advanced Textbooks in Control and Signal Processing are designed as a vehicle for the systematic presentation of course material for both popular and innovative topics in the discipline It is hoped that prospective authors will welcome the opportunity to publish a structured and systematic presentation of some of the newer emerging control and signal processing technologies in the textbook series
