

THE TRANSMISSION—The standard three-speed type of transmission is used in your Dodge car. Scientific engineering and the use of helical gears promote smooth, silent operation at any speed. Anti-friction bearings at all vital points make for exceptionally long life. The shifting mechanism—in addition to being simple and nearly fool-proof—is very easy to operate.

Under normal service, the only attention required by the transmission is the checking of the lubricant level and replacing of the lubricant according to the maintenance schedule on pages 18-19.

THE REAR AXLE—Quiet operation and riding comfort are provided for in your Dodge rear axle. First of all, the axle is of very substantial design and construction. The housing is built of heavy steel stampings welded together. Friction and wear are reduced to a minimum in the pinion and axle shafts through the use of roller bearings. The pinion and ring gears are of hypoid type—permitting lowering of the center of gravity and contributing to long life. The axle is secured to the frame through the rear springs, and these cushion the driving and braking loads for riding ease. The oil seals in the axle have proved most efficient in keeping the lubricant in, and dust or abrasive material out.

Little attention is required by the rear axle other than the lubrication recommended on page 21. It is important, however, that the quality and level of the lubricant be maintained at all times.

Do not carry the lubricant above the filler plug, do not lubricate the rear wheel bearings in excess of the recommended specifications. Excess lubricant at either point may work into the brakes and cause erratic brake operation.

A vent at the top of the housing releases any air pressure that may build up in the housing through expansion of the lubricant.

THE UNIVERSAL JOINTS—Boots protect the universal joints from dust and water. Inspect joints as specified in schedule on page 19. If boots are damaged, clean joint out thoroughly, relubricate and install new boots. Note: Never put more than $1\frac{1}{4}$ oz. of lubricant in a universal joint, as any excess lubricant will be forced into dust boot, causing an out-of-balance condition, which in turn will result in a distinct vibration. Your Dodge dealer should attend to this service.
