learning and military history Friedman's work offers a striking synthesis of thinking on tactics as well as strategy Part One of the book establishes a tactical system meant to replace the Principles of War checklist First the contextual role of tactics with regards to strategy and war will be established This will necessarily lean on major strategic theories in order to illuminate the role of tactics This section will be formed around the Physical Mental and Moral planes of battlefield interaction used by theorists such as J F C Fuller and John Boyd Each plane will then be examined in turn and many of the classic Principles of War will be discussed along with some new ones It will present some standard methods that tacticians can use to gain an advantage on the battlefield using historical examples that illustrate each concept These tactical tenets include maneuver mass firepower tempo surprise deception confusion shock and the role of the moral aspects of combat Finally Part One will circle back around by discussing the role of tactical victory once achieved in contributed to a strategy Part One is short by design It is intended to be both compelling and easily mastered for junior non commissioned officers and company grade officers while still rich enough to be interesting to both specialist and non specialist academics It is a book meant not just for bookshelves but also for ruck sacks and cargo pockets Part Two builds on Part One by exploring concepts with which the tactician must be familiar with such as the culminating point of victory mission tactics and decentralized command and control offensive and defensive operations and the initiative Part Three will conclude the book examining implications of the presented tactical systems to a variety of other issues in strategic studies
