Standing Trap Modes:

Laser Manipulation of Atoms and Ions Ennio Arimondo, W.D. Phillips, F. Strumia, 1993-04-08 The recent fascinating progress on laser cooling is the result of the close connection between theoretical work and the rapid technological advances in laser sources particularly in the field of powerful semiconductor and solid state lasers operating over a wide range of optical and near infrared frequencies The very close international and personal collaboration amongst the researchers resulting in a direct link between experimental data and theoretical calculations which characterize work in this field have been important factors in the rapid comprehension of the subtle and beautiful phenomena involved in laser manipulation This Enrico Fermi school is the first formal school fully devoted to this topic The theoretical part of the book includes contributions on the framework for the study of the photon momentum exchanges in the absence of relaxation recent mechanisms of laser cooling an analysis of the cooling forces analysis of atomic and molecular beams cooling through coherent population trapping and the relation between laser cooling and quantum nondemolition measurements The experimental section deals with topics such as an analysis of atomic and molecular beams methods and applications of laser cooling advances in laser cooling and the new exciting field of atomic interferometry All students and researchers working in this field will welcome this excellent review of research and progress in laser cooling so strongly linked to the fundamental understanding of physics

Mechanisms of Chromospheric and Coronal Heating Peter Ulmschneider, Eric R. Priest, Robert Rosner, 2013-06-29 One of the great problems of astrophysics is the unanswered question about the origin and mechanism of chromospheric and coronal heating Just how these outer stellar envelopes are heated is of fundamental importance since all stars have hot chromospheric and coronal shells where the temperature rises to millions of degrees comparable to the temperatures in the stars cores Here for the first time is a comprehensive inventory of the proposed chromospheric and coronal heating theories The proposed heating processes are critically compared and the observational evidence for the various mechanisms is reviewed This is essential reading for all those working in such fields as stellar activity radio and XUV emission rotation and mass loss for whom a detailed and consistent presentation of our knowledge of chromospheric and coronal heating mechanisms is urgently needed

Quantum Electrodynamics Toichiro Kinoshita, 1990 Quantum electrodynamics is an essential building block and an integral part of the gauge theory of unified electromagnetic weak and strong interactions the so called standard model Its failure or breakdown at some level would have a most profound impact on the theoretical foundations of elementary particle physics as a whole Thus the validity of QED has been the subject of intense experimental tests over more than 40 years of its history This volume presents an up to date review of high precision experimental tests of QED together with comprehensive discussion of required theoretical work

Optics Letters, 2004

Nonclassical Light from Semiconductor Lasers and LEDs Jungsang Kim, Seema Somani, Yoshihisa Yamamoto, 2012-12-06 The quantum statistical properties of light generated in a semiconductor laser and a light emitting diode LED have been a eld of intense research for more than a decade This research monograph discusses recent research activities in nonclassical light generation based on semiconductor devices performed mostly at Stanford University When a semiconductor material is used as the active medium to generate photons as in semiconductor lasers and LEDs the ow of carriers electrons and holes is converted into a ow of photons Provided that the conversion is fast and efficient the statistical properties of the carriers pump noise can be transferred to the photons if pump noise can be suppressed to below the shot noise value the noise in the photon output can also be suppressed below the Poisson limit Since electrons and holes are fermions and have charges the statistical properties of these particles can be significantly different from those of photons if the structure of the light emitting device is properly designed to provide interaction between these particles There has been a discrepancy between the theoretical understanding and experimental observation of noise in a macroscopic resistor until very recently The dissipation that electrons experience in a resistor is expected to accompany the fluctuation due to partition noise leading to shot noise in the large dissipation limit as is the case with photons Experimental observation shows that thermal noise expected only in a thermal equilibrium situation zero bias condition is the only source of noise featured by a resistor dependent of the current

Sound Reproduction Floyd Toole, 2017-07-28 Sound Reproduction The Acoustics and Psychoacoustics of Loudspeakers and Rooms Third Edition explains the physical and

perceptual processes that are involved in sound reproduction and demonstrates how to use the processes to create high quality listening experiences in stereo and multichannel formats Understanding the principles of sound production is necessary to achieve the goals of sound reproduction in spaces ranging from recording control rooms and home listening rooms to large cinemas This revision brings new science based perspectives on the performance of loudspeakers room acoustics measurements and equalization all of which need to be appropriately used to ensure the accurate delivery of music and movie sound tracks from creators to listeners The robust website www.routledge.com/cw/toole is the perfect companion to this necessary resource

Low-Frequency Waves in Space Plasmas Andreas Keiling, Dong-Hun Lee, Valery Nakariakov, 2016-02-10 Low frequency waves in space plasmas have been studied for several decades and our knowledge gain has been incremental with several paradigm changing leaps forward In our solar system such waves occur in the ionospheres and magnetospheres of planets and around our Moon They occur in the solar wind and more recently they have been confirmed in the Sun's atmosphere as well The goal of wave research is to understand their generation their propagation and their interaction with the surrounding plasma Low frequency Waves in Space Plasmas presents a concise and authoritative up to date look on where wave research stands What have we learned in the last decade What are unanswered questions While in the past waves in different astrophysical plasmas have been largely treated in separate books the unique feature of this monograph is that it covers waves in many plasma regions including Waves in geospace including ionosphere and magnetosphere Waves in planetary magnetospheres Waves at the Moon Waves in the solar wind Waves in the solar atmosphere Because of the breadth of topics covered this volume should appeal to a broad community of space scientists and students and it should also be of interest to astronomers astrophysicists who are studying space plasmas beyond our Solar System

Soliton-driven Photonics A.D. Boardman, A.P. Sukhorukov, 2001-08-31 It is ironic that the ideas of Newton which described a beam of light as a stream of particles made it difficult for him to explain things like thin film interference Yet these particles called photons have caused the adjective photonic to gain common usage when referring to optical phenomena The purist might argue that only when we are confronted by the particle nature of light should we use the word photonics Equally the argument goes on only when we are face to face with an integrable system i.e. one that possesses an infinite number of conserved quantities should we say soliton rather than solitary wave Scientists and engineers are pragmatic however and they are happy to use the word soliton to describe what appears to be an excitation that is humped multi humped or localised long enough for some use to be made of it The fact that such solitons may stick to each other fuse upon collision is often something to celebrate for an application rather than just evidence that after all these are not really solitons in the classic sense Soliton therefore is a widely used term with the qualification that we are constantly looking out for deviant behaviour that draws our attention to its solitary wave character In the same spirit photonics is a useful generic cover all noun even when electromagnetic theory or optics would suffice

Annual Review Of Cold Atoms And Molecules,

Bose-Einstein Condensation in Atomic Gases Società italiana di fisica, 1999 Although first proposed by Einstein in 1924 Bose Einstein condensation BEC in a gas was not achieved until 1995 when using a combination of laser cooling and trapping and magnetic trapping and evaporation it was first observed in rubidium and then in lithium and sodium cooled down to extremely low temperatures This book brought together many leaders in both theory and experiment on Bose Einstein condensation in gases Their lectures provided a detailed coverage of the experimental techniques for the creation and study of BEC as well as the theoretical foundation for understanding the properties of this novel system This volume provides the first systematic review of the field and the many developments that have taken place in the past three years
