Building Imaginary Worlds Mark J.P. Wolf, 2014-03-14 Mark J P Wolf's study of imaginary worlds theorizes world building within and across media including literature comics film radio television board games video games the Internet and more Building Imaginary Worlds departs from prior approaches to imaginary worlds that focused mainly on narrative medium or genre and instead considers imaginary worlds as dynamic entities in and of themselves Wolf argues that imaginary worlds which are often transnarrative transmedial and transauthorial in nature are compelling objects of inquiry for Media Studies Chapters touch on a theoretical analysis of how world building extends beyond storytelling the engagement of the audience and the way worlds are conceptualized and experienced a history of imaginary worlds that follows their development over three millennia from the fictional islands of Homer's Odyssey to the present internarrative theory examining how narratives set in the same world can interact and relate to one another an examination of transmedial growth and adaptation and what happens when worlds make the jump between media an analysis of the transauthorial nature of imaginary worlds the resulting concentric circles of authorship and related topics of canonicity participatory worlds and subcreation's relationship with divine Creation Building Imaginary Worlds also provides the scholar of imaginary worlds with a glossary of terms and a detailed timeline that spans three millennia and more than 1 400 imaginary worlds listing their names creators and the works in which they first appeared

Lifting the Scientific Veil Paul Sukys, 1999 Lifting the Scientific Veil has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences Since nonscientists are generally responsible for making laws financing research or at the very least for voting it is essential that they understand the significant impact that science has on everyday life The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century the big bang quantum physics relativity and evolution After each theory is explained informally the book shows how that theory and related technology impact upon one's personal life Legal and political aspects of these theories are explored as well as philosophical and theological implications

Self Barry Dainton, 2014-04-24 In the third in a new series of short provoking books of original philosophy acclaimed thinker Barry Dainton takes us through the nature of Self When you think What am I what's actually doing the thinking Is it a soul or some other kind of mental entity separate from your body or are you just a collection of nerve endings and narratives In the third in a new series of short provoking books of original philosophy acclaimed thinker Barry Dainton takes us through the nature of Self and its relation to the rest of reality Starting his journey with Descartes claim that we are non physical beings even if it seems otherwise and Locke's view that a person is self conscious matter though not necessarily in human form Dainton explores how today's rapid movement of people and information affects our understanding of self When technology re configures our minds will it remake us or kill us If teleportation becomes possible would it be rational to use it Could we achieve immortality by uploading ourselves into virtual worlds Far reaching and witty *Self* is a spirited exploration of the idea that in a constantly changing world we and our bodies can go their separate ways

On a Silver Platter Greg M. Smith, 1999 When the new medium of CD ROMs emerged industry figures and critics alike proclaimed their virtually unlimited potential Adapting material from well established media like television and film CD ROMs have quickly transformed genres such as science fiction and horror At the same time the realities of actual CD ROMs often fall short of their utopian visions *On a Silver Platter* marks a coming of age for CD ROMs as a commercially and aesthetically significant medium demanding critical attention Greg Smith brings together media scholars such as Lisa Cartwright Henry Jenkins Janet Murray and Scott Bukatman to analyze how CD ROMs offer alternatives to familiar places to museums to cities and especially to classrooms Examining specific CD ROM titles including *Sim City Civilization* and *Phantasmagoria* the contributors argue that CD ROMs are complex texts worthy of close consideration both for how they have changed our understanding of space and genre and for how they will impact the development of future media By examining particular CD ROM texts and contexts *On a Silver Platter* probes this new medium for insight and understanding into the current state of multimedia and into the

Slow Light: Invisibility, Teleportation, And Other Mysteries Of Light Sidney

Perkowitz, 2011-07-26 Slow Light is a popular treatment of today's astonishing breakthroughs in the science of light. Even though we don't understand light's quantum mysteries, we can slow it to a stop and speed it up beyond its Einsteinian speed limit (186,000 miles/sec). Use it for quantum telecommunications, teleport it, manipulate it to create invisibility, and perhaps generate hydrogen fusion power with it. All this is lucidly presented for non-scientists who wonder about teleportation, Harry Potter invisibility cloaks, and other fantastic outcomes. Slow Light shows how the real science and the fantasy inspire each other and projects light's incredible future. Emory physicist Sidney Perkowitz discusses how we are harnessing the mysteries of light into technologies like lasers and fiber optics that are transforming our daily lives. Science fiction fantasies like Harry Potter's invisibility cloak are turning into real possibilities. Please [click here](#) for more info. a
