Trends in Quantum Electronics A.M. Prokhorov, I. Ursu, 2013-03-09 The second International Conference on Trends in Quantum Electronics TQE 85 was held in Bucharest at the National Centre for Physics in September 1985 and brought together more than 350 scientists from 22 countries In accordance with the objectives established at the first conference which was held in 1982 in conjunction with the third International Summer School in Coherent Optics the second conference concentrated upon the central topics and chief directions of development in quantum electronics which stands out as an area of science and technology that is currently expanding vigorously On the other hand it was also apparent that TQE 85 was primarily influenced by the worldwide celebration in 1985 of the 25th anniversary of the laser a moment of prime importance in the development of many frontline fields including communications chemistry biology health care and materials processing A special session was devoted to this anniversary In keeping with the dynamic spirit of the conference the fine quality of the invited lectures and the other contributions set a high scientific standard for the proceedings Mention should be made of the posters that were presented throughout the conference These together with the exhibition of books and journals and a display of specialized scientific equipment did much to create a framework for effective communication and stimulating interaction to the benefit of all the participants Of invaluable help in the preparation of the conference was the collaboration of the International Scientific Advisory Committee Infrared Vibration-Rotation Spectroscopy Geoffrey

Duxbury, 2000-02-03 Written by an author internationally renowned in the field of molecular spectroscopy this book provides an up to date account of the new experimental and theoretical methods on the high resolution infrared spectroscopy of small molecules The approach uses a visual approach to spectral analysis containing large numbers of energy level diagrams and spectra spectra to show the progress in identification and line assignment Covering new and important techniques on laser and Fourier Transform it also contains both theoretical and experimental chapters Divided into 3 parts features covered in the first part include Calculations of the vibration rotation energy levels of rigid and non rigid molecules Calculations of the intensities of vibration rotation transitions Introduction to linear and non linear molecular spectroscopy Use of interferometric and laser spectrometers for measuring infrared spectra The second part presents a detailed treatment of the analysis of the high resolution vibration rotation spectra of linear quasilinear symmetric rotor and asymmetric rotor molecules In the final part of the book the following topics of current interest are examined in depth Electric and magnetic resonance spectroscopy Spectroscopy of transient species free radicals and ions and Van der Waals clusters Atmospheric and astrophysical spectroscopy including the spectroscopy of the atmosphere of the Earth and nearby planets cool stars and molecules in the interstellar medium This comprehensive book is an essential reference for researchers who want to be at the cutting edge in the field of spectroscopy and physical chemistry atmospheric science and infrared astronomy *The Quantum Mechanics Solver* Jean-Louis Basdevant, Jean Dalibard, 2019-05-22 Motivates students by challenging them with real
