The Changing Economic Geography of Globalization Giovanna Vertova, 2006-04-20 The process of globalization has had profound often destabilizing effects on space at all levels i.e. local regional national international This revealing book analyzes both theoretically and empirically the effects of globalization over space It considers through a dialogue among different paradigms the ways in which space has become more important in the global economy Globalization has been advocated as a way of shrinking time and space which will lead to a homogenized global market a suggestion challenged in differing ways and with a variety of approaches by all the contributors to this volume Leading authorities from a range of disciplines are represented amongst this impressive list of contributors including Eric Sheppard Bjørn Asheim Richard Walker and Peter Swann The chapters demonstrate persuasively the continuing and even increasing role of space in the global economy and throughout the book covers viewpoints from the

fields of international political economy economic geography regional and local economics This impressive volume which contains a selection of the best in contemporary scholarship will be of interest to the international arena of academicians policy makers and professionals in these or related fields *The Geographical Magazine* ,1987-07 The SAGE Handbook of Geographical Knowledge John A Agnew,David N Livingstone,2011-03-04 Broad in scope and edited by two massive names in geography this is a critical exploration of how the field has emerged and fared over the course of its modern institutionalization *Geographers* Elizabeth Baigent,André Reyes Novaes,2018-11-15 *Geographers Biobibliographical Studies* Volume 37 explores the concept of distinction in geography Through the lives of six geographers working in Brazil North America Europe and R union it investigates what distinction consists of how we identify and celebrate it and how it relates to quotidian practices in the discipline The volume highlights the continuing importance of biography and the International Geographical Union in recording and assessing distinction It also considers the relevance of personal networks for the circulation and translation of distinguished geographical knowledge and how this knowledge can underpin applied projects and critical appraisal of geographical scholarship both at a national and sub national level Gendered notions of distinction are also addressed particularly through June Sheppard who found limited recognition for her work as a result of gendered expectations within the discipline and society at large By reflecting on how we locate distinguished geographers and tell their histories *Geographers Biobibliographical Studies* Volume 37 makes an important contribution to fostering less canonical work in historical geography **Geographers** Hayden Lorimer,Charles W. J. Withers,2016-09-22 *Geographers Biobibliographical Studies* Volume 35 includes seven essays discussing the contribution made to geography by eleven geographers The subjects include three British figures Francis Rennell Rodd 1895 1978 expert on the Sahara David Harris 1930 2013 a geographer with archaeological interests and William Gordon East historical geographer 1902 1998 a Spanish urban scholar Enric Martin 1928 2012 Mauricio de Almeida Abreu 1948 2011 a Brazilian urban and historical geographer and two essays on French geographers one on Jacques Levainville 1869 1932 the other an innovative prosopographical essay on five French authors involved in the monumental Vidalian *Geographie Universelle* of the early 20th century In these studies geography s international dimensions are illuminated and the subject s vibrant history shown to be the result of committed endeavours in the field in the classroom and in print **Geography** ,1981 Includes section Reviews and other bibliographical material **The Origins And Spread Of Agriculture And Pastoralism In Eurasia** David R. Harris,2024-11-01 As the first book to examine the origins and spread of agriculture and pastoralism in Europe and Asia as a whole this major contribution should be essential reading for archaeologists anthropologists biologists and geographers Adopting a novel approach to the subject the authors examine it first in terms of seven different disciplinary perspectives social ecological genetic linguistic biomolecular epidemiological and geogrphical Then 20 case studies are presented which are based primarily on archaeological and biological evidence and which relate to three major regions Southwest Asia

Europe and Central Asia to the Pacific The book concludes with an overview of Eurasia as a whole The transition from hunting and gathering to agriculture had revolutionary consequences for human society It led to the emergence of urban civilizations and ultimately to humanity's almost complete dependence on relatively few domesticated animals and plants The subject has been much studied but the results have tended to be interpreted largely in terms of local cultural sequences with insufficient comparison made with evidence from other areas In contrast this book provides a continental scale framework with its scope extended to pastoralism because in Eurasia both the raising of livestock and the cultivation of crops were integral components of the agricultural revolution from its inception some 10 000 years ago Comprehensive and authoritative The Origins and Spread of Agriculture and Pastoralism in Eurasia should appeal strongly to the wide readership of students and specialists concerned with the prehistoric antecedents of modern civilization *The Man in the Monkeynut Coat*

Kersten T. Hall, 2014 Tells the story of the English physicist and molecular biologist William T Astbury and how his work forms a previously untold chapter in the story of the discovery of the structure of DNA

Geography Education's Potential and the Capability Approach Richard Bustin, 2019-08-10 This book explores the pivotal role that geography as a school subject plays in helping every young person achieve their educational potential Expressed as GeoCapabilities this concept draws on the capabilities approach developed by Amartya Sen and Martha Nussbaum applied to curriculum thinking in schools While traditional subjects have often been deemed irrelevant and outdated in an overcrowded secondary school curriculum subjects like geography have often been lost or combined with others to fulfil a broad skills agenda More recent talk of a knowledge led curriculum can often lead to the recitation of facts at the expense of developing deeper understanding This book argues the concept of powerful geographical knowledge based on the work of Michael Young and David Lambert invests the subject of geography with its educational potential this forms the basis of GeoCapabilities GeoCapabilities focuses on both what is being taught and why and as such provides a framework of curriculum thinking which will be of interest and value to geography teachers school leaders with curriculum development responsibilities and all those interested in the capability approach and the moral imperative of education **Doctoral Examination: Exploring**

Practice Across the Globe Vijay Kumar, Stan Taylor, Sharon Sharmini, 2022-11-30 This book considers how the main doctoral awarding countries from across the globe examine doctoral degrees It compares and contrasts their approaches comments on their robustness and identifies examples of good practice The doctorate is the highest award made by universities but the examination process involved varies considerably in form and structure across the globe This book studies the similarities and differences systematically on a cross national basis providing insights into the ways in which countries have sought to ensure that the awarded degree is comparable in standards This book presents case studies of examination policies and practices covering 20 countries which collectively are responsible for nearly 75% of global doctoral awards Each chapter includes a summary of the key points and a concluding chapter analyses the case studies from a

comparative perspective This book is written by a distinguished international team of authors who are researchers in doctoral education and will be of interest to all those engaged in the field particularly policy makers graduate deans and programme leaders supervisors administrators examiners and scholars in the field **A Geography of Heritage** Brian Graham,Greg Ashworth,John Tunbridge,2016-04-29 The concept of heritage relates to the ways in which contemporary society uses the past as a social political or economic resource However heritage is open to interpretation and its value may be perceived from differing perspectives often reflecting divisions in society Moreover the schism between the cultural and economic uses of heritage also gives rise to potential conflicts of interest Examining these issues in depth this book is the first sustained attempt to integrate the study of heritage into contemporary human geography It is structured around three themes the diversity of use and consumption of heritage as a multi sold cultural and economic resource the conflicts and tensions arising from this multiplicity of uses producers and consumers and the relationship between heritage and identity at a variety of scales **The Rural** Richard Munton,2017-05-15 The rural has long been regarded as an important site of geographical inquiry even if our understanding of it has not always been treated as conceptually different from the urban That said rural research has pursued a number of distinct empirical agendas ranging from the operation and impacts of agribusiness to local resistance to global food supply chains to differing representations of the rural In doing so rural geographers have critically examined the relevance and significance of ideas drawn from numerous traditions including political economy ecological modernization and cultural theory amending them as appropriate in their search to understand the nature and trajectory of rural areas Up until the 1980s attention remained largely focused upon agriculture as the primary land use but increasingly new forms of rural consumption housing recreation nature conservation have taken centre stage as the primacy of local agricultures has been undermined by reduced state protection and new rural populations which have migrated out from the city More recently research has been dominated by the cultural turn with particular emphases upon society nature relations interpretations of landscape marginalised others and analyses of the relations between representation and practice In the last decade a more holistic view of the rural bringing together different aspects of the two previous themes has emerged through more politically oriented studies of rural governance concerned with the functioning of interest groups participation protest and the allocation and management of resources The volume is thus structured into three sections concerned with agriculture and food the rural and rural governance The great majority of the selected papers combine both empirical material often highly informative case studies and important conceptual arguments about change in the rural condition that can be linked to ideas being employed elsewhere in Geography and the Social Sciences more generally These critical reflections have been drawn very largely from research conducted in advanced economies which at least provide some commonality of experience allowing the transfer of ideas between what otherwise might be seen as very differing geographical contexts *Applied Geography* Michael Pacione,2002-03-11 *Applied Geography* offers an invaluable

introduction to useful research in physical environmental and human geography and provides a new focus and reference point for investigating and understanding problem orientated research Forty nine leading experts in the field introduce and explore research which crosses the traditional boundary between physical and human geography A wide range of key issues and contemporary debates are within the books main sections which cover natural and environmental hazards environmental change and management challenges of the human environment techniques of spatial analysis Applied geography is the application of geographic knowledge and skills to identify the nature and causes of social economic and environmental problems and inform policies which lead to their resolution
