Innovative curriculum design Neal Petersen, Adri du Toit, Elsa Mentz, Robert J. Balfour, 2023-09-29 The focus of this book is original research regarding the implementation of problem based learning and pedagogies of play as active approaches to foster self directed learning With the Fourth Industrial Revolution 4IR in mind educational institutions need to rethink teaching and learning for the future As such active engagement can be encouraged as evident in this book where problem based learning drives learning through real world problems while pedagogy of play focuses on innovative environments where the action of play and learning are integrated with the aim of developing SDL The following are addressed in the chapters an overview of problem based learning and pedagogy of play metaliteracy playful problem based learning tasks computational thinking in game based tasks and geometry solving puzzles applying LEGO using drama as the pedagogy of play and implementing educational robotics The empirical research findings disseminated in this book aim to inspire academics in the research focus area of self directed learning with active learning approaches in the school and tertiary classroom that hold affordances to enhance 21st century skills Active learning is an umbrella term for pedagogies that mainstream student engagement such as problem based learning cooperative learning gamification role play and drama This scholarly book highlights various engaging pedagogies Software Engineering and Information Technology - Proceedings of the 2015 International Conference (seit2015) Xiaolong Li, 2015-12-17 This book consists of sixty seven selected papers presented at the 2015 International Conference on Software Engineering and Information Technology SEIT2015 which was held in Guilin Guangxi China during June 26 28 2015 The SEIT2015 has been an important event and has attracted many scientists engineers and researchers from academia government laboratories and industry internationally The papers in this book were selected after rigorous review SEIT2015 focuses on six main areas namely Information Technology Computer Intelligence and Computer Applications Algorithm and Simulation Signal and Image Processing Electrical Engineering and Software Engineering SEIT2015 aims to provide a platform for the global researchers and practitioners from both academia as well as industry to meet and share cutting edge development in the field This conference has been a valuable opportunity for researchers to share their knowledge and results in theory methodology and applications of Software Engineering and Information Technology **Formal Methods for the Analysis of Biomedical Ontologies** Guo-Qiang Zhang, Rashmie Abeyasinghe, Licong Cui, 2022-11-08 The book synthesizes research on the analysis of biomedical ontologies using formal concept analysis including through auditing curation and enhancement As the evolution of biomedical ontologies almost inevitably involves manual work formal methods are a particularly useful tool for ontological engineering and practice particularly in uncovering unexpected bugs and content materials The book first introduces simple but formalized strategies for discovering undesired and incoherent patterns in ontologies before exploring the application of formal concept analysis for semantic completeness The book then turns to formal concept analysis a classical approach used

in the mathematical treatment of orders and lattices as an ontological engineering principle focusing on the structural property of ontologies with respect to its conformation to lattice or not non lattice The book helpfully covers the development of more efficient algorithms for non lattice detection and extraction required by exhaustive lattice non lattice analysis The book goes on to highlight the power and utility of uncovering non lattice structure for debugging ontologies and describes methods that leverage the linguistic information in concept names labels for ontological analysis It also addresses visualization and performance evaluation issues before closing with an overview and forward looking perspectives on the field This book is intended for graduate students and researchers interested in biomedical ontologies and their applications It can be a useful supplement for courses on knowledge representation and engineering and also provide readers with a reference for related scientific publications and literature to assist in identifying potential research topics All mathematical concepts and notations used in this book can be found in standard discrete mathematics textbooks and the appendix at the end of the book provides a list of key ontological resources as well as annotated non lattice and lattice examples that were discovered using the authors methods demonstrating how bugs are fixed by converting non lattices to lattices with minimal edit changes

Origins of Yiddish Dialects Alexander Beider, 2015 This book traces the origins of modern varieties of Yiddish and presents evidence for the claim that contrary to most accounts Yiddish only developed into a separate language in the 15th century Through a careful analysis of Yiddish phonology morphology orthography and the Yiddish lexicon in all its varieties Alexander Beider shows how what are commonly referred to as Eastern Yiddish and Western Yiddish have different ancestors Specifically he argues that the western branch is based on German dialects spoken in western Germany with some Old French influence while the eastern branch has its origins in German dialects spoken in the modern day Czech Republic with some Old Czech influence The similarities between the two branches today are mainly a result of the close links between the underlying

German dialects and of the close contact between speakers Following an introduction to the definition and classification of Yiddish and its dialects chapters in the book investigate the German Hebrew Romance and Slavic components of Yiddish as well as the sound changes that have occurred in the various dialects The book will be of interest to all those working in the areas of Yiddish and Jewish Studies in particular and historical linguistics and history more generally *Natural Language Processing and Information Systems* Flavius Frasinca, Ashwin Ittoo, Le Minh Nguyen, Elisabeth Métais, 2017-06-12 This book constitutes the refereed proceedings of the 22nd International Conference on Applications of Natural Language to Information Systems NLDB 2017 held in Liège Belgium in June 2017 The 22 full papers 19 short papers and 16 poster papers presented were carefully reviewed and selected from 125 submissions The papers are organized in the following topical sections feature engineering information extraction information extraction from resource scarce languages natural language processing applications neural language models and applications opinion mining and sentiment analysis question answering systems and applications semantics based models and applications and text summarization *Neuromuscular Training and Adaptations in Youth Athletes* Urs Granacher, Christian Puta, Holger Horst Werner Gabriel, David G.
