Serialization and Persistent Objects Jiri Soukup,Petr Macháček,2014-04-23 Recently the pressure for fast processing and efficient storage of large data with complex relations increased beyond the capability of traditional databases Typical examples include iPhone applications computer aided design both electrical and mechanical biochemistry applications and incremental compilers Serialization which is sometimes used in such situations is notoriously tedious and error prone In this book Jiri Soukup and Petr Mach ek show in detail how to write programs which store their internal data automatically and transparently to disk Together with special data structure libraries which treat relations among objects as first class entities and with a UML class diagram generator the core application code is much simplified The benchmark chapter shows a typical example where persistent data is faster by the order of magnitude than with a traditional database in both traversing and accessing the data The authors explore and exploit advanced features of object oriented languages in a depth hardly seen in print before Yet you as a reader need only a basic knowledge of C Java C or Objective C These languages are quite similar with respect to persistency and the authors explain their differences where necessary The book targets professional programmers working on any industry applications it teaches you how to design your own persistent data or how to use the existing packages efficiently Researchers in areas like language design compiler construction performance evaluation and no SQL applications will find a wealth of novel ideas and valuable implementation tips Under <http://www.codefarms.com> book you will find a blog and other information including a downloadable zip file with the sources of all the listings that are longer than just a few lines ready to compile and run

Construction and Evolution of Code Generators Sven Jörges,2013-01-12 Automatic code generation is an essential cornerstone of model driven approaches to software development Currently lots of techniques are available that support the specification and implementation of code generators such as engines based on templates or rule based transformations All those techniques have in common that code generators are either directly programmed or described by means of textual specifications This monograph presents Genesys a general approach which advocates the graphical development of code generators for arbitrary source and target languages on the basis of models and services In particular it is designed to support incremental language development on arbitrary metalevels The use of models allows building code generators in a truly platform independent and domain specific way Furthermore models are amenable to formal verification methods such as model checking which increase the reliability and robustness of the code generators Services enable the reuse and integration of existing code generation frameworks and tools regardless of their complexity and at the same time manifest as easy to use building blocks which facilitate agile development through quick interchangeability Both models and services are reusable and thus form a growing repository for the fast creation and evolution of code generators

Simulating Spacecraft Systems Jens Eickhoff, 2009-09-25 Satellite development worldwide has significantly changed within the last decade and has been accelerated and optimized by modern simulation tools The classic method of developing and testing several models of a satellite and its subsystems with the aim to build a pre flight and finally a flight model is being replaced more and more by a considerably faster and more inexpensive method The new approach no longer includes functional test models on entire spacecraft level but a system simulation Thus overall project runtimes can be shortened But also significantly more complex systems can be managed and success oriented tests on integration and software level can be realized before the launch Applying modern simulation infrastructures already during spacecraft development phase enables the consistent functionality checking of all systems both in detail and concerning their interaction Furthermore they enable checks of the system s proper functionality their reliability and safety redundancy But also analysis regarding aging and lifetime issues can be performed by simulation Project related simulations of operational scenarios for example with remote sensing satellites and the checking of different operational modes are of similar importance On the whole risk is reduced

significantly and the satellite can be produced in a considerably more cost efficient way with higher quality and in shorter periods of time Therefore Simulating Spacecraft Systems the title of the present book is an important domain of modern system engineering which meanwhile has successfully established a position in many other sectors of industry and research too Microelectronic Systems Albert Heuberger, Günter Elst, Randolph Hanke, Janina Heppner, Karlheinz Kirsch, 2011-12-27 This book is dedicated to Prof Dr Heinz Gerh user on the occasion of his retirement both from the position of Executive Director of the Fraunhofer Institute for Integrated Circuits IIS and from the Endowed Chair of Information Technologies with a Focus on Communication Electronics LIKE at the Friedrich Alexander Universit t Erlangen N rnberg Heinz Gerh user s vision and entrepreneurial spirit have made the Fraunhofer IIS one of the most successful and renowned German research institutions He has been Director of the Fraunhofer IIS since 1993 and under his leadership it has grown to become the largest of Germany s 60 Fraunhofer Institutes a position it retains to this day currently employing over 730 staff Likely his most important scientific as well as application related contribution was his pivotal role in the development of the mp3 format which would later become a worldwide success The contributions to this Festschrift were written by both Fraunhofer IIS staff and external project team members in appreciation of Prof Dr Gerh user s lifetime academic achievements and his inspiring leadership at the Fraunhofer IIS The papers reflect the broad spectrum of the institute s research activities and are grouped into sections on circuits information systems visual computing and audio and multimedia They provide academic and industrial researchers in fields like signal processing sensor networks microelectronics and integrated circuits with an up to date overview of research results that have a huge potential for cutting edge industrial applications **Distributed Applications and Interoperable Systems** René Meier, Sotirios Terzis, 2008-05-20 This book constitutes the refereed proceedings of the 8th IFIP WG 6 1 International Conference on Distributed Applications and Interoperable Systems DAIS 2008 held in Oslo Norway in June 2008 The DAIS conference was held as a joint event in federation with the 10th IFIP WG 6 1 International Conference on Formal Methods for Open Object Based Distributed Systems FMOODS 2008 and the 10th International Conference on Coordination Models and Languages Coordination 2008 The 19 revised full papers presented together with 6 revised work in progress papers were carefully reviewed and selected from 66 submissions The papers cover all aspects of distributed applications and interoperable systems including their design implementation operation and maintenance as well as supporting middleware experimental studies and advances to software engineering methodologies and tools The papers are organized in topical sections on service orientation QoS management and composition dependability and reliability peer to peer overlays adaptation model driven development components protocols and interactions as well as pervasive computing **Proceedings of the International Conference on Data Engineering 2015 (DaEng-2015)** Jemal H.
