set of complex and shifting struggles for justice not simply between Matabeleland and the central state but also internally within Matabeleland along multiple fault lines including class and culture The relevance of understanding civil society in Matabeleland for Zimbabwe and Africa more widely is brought to the fore The book will be of interest and value to scholars of civil society politics and democratisation across the African continent

On-demand Link-state Routing in Ad-hoc Networks Soumya Roy, 2003 This thesis explores the challenges merits and demerits of using link state information for on demand routing in ad hoc networks such that routers maintain path information for only those destinations for which they have data traffic We first present the source tree on demand adaptive routing SOAR protocol in which each router exchanges with its neighbors a source tree containing paths to only those destinations for which the router is the source or relay of data packets The main advantage of SOAR is that it is more scalable and better performing than current state of the art on demand routing protocols However a limitation of SOAR is that it requires data packets to specify the paths they traverse to detect loops To eliminate the need for source routing or path traversal information in data packets we introduce the on demand link vector OLIVE protocol which prevents temporary loops for each destination by synchronizing relevant link state information among neighbors In OLIVE the advertised paths combine to form a source graph rather than a source tree OLIVE is shown to outperform the current routing protocols proposed for mobile ad hoc networks in terms of control overhead throughput and network delay
