Introduction to AI Techniques for Renewable Energy System Suman Lata Tripathi, Mithilesh Kumar Dubey, Vinay Rishiwal, Sanjeevikumar

Padmanaban, 2021-11-25 Introduction to AI techniques for Renewable Energy System Artificial Intelligence AI techniques play an essential role in modeling analysis and prediction of the performance and control of renewable energy The algorithms used to model control or predict performances of the energy systems are complicated involving differential equations enormous computing power and time requirements Instead of complex rules and mathematical routines AI techniques can learn critical information patterns within a multidimensional information domain Design control and operation of renewable energy systems require a long term series of meteorological data such as solar radiation temperature or wind data Such long term measurements are often non existent for most of the interest locations or wherever they are available they suffer from

several shortcomings like inferior quality of data and insufficient long series. The book focuses on AI techniques to overcome these problems. It summarizes commonly used AI methodologies in renewable energy with a particular emphasis on neural networks, fuzzy logic, and genetic algorithms. It outlines selected AI applications for renewable energy. In particular, it discusses methods using the AI approach for prediction and modeling of solar radiation, system performances, and controls of the solar photovoltaic (PV) systems. Features: Focuses on a significant area of concern to develop a foundation for the implementation of renewable energy systems with intelligent techniques. Showcases how researchers working on renewable energy systems can correlate their work with intelligent and machine learning approaches. Highlights international standards for intelligent renewable energy systems design, reliability, and maintenance. Provides insights on solar cell, biofuels, wind, and other renewable energy systems design and characterization, including the equipment for smart energy systems. This book, which includes real-life examples, is aimed at undergraduate and graduate students and academicians studying AI techniques used in renewable energy systems.

Advances in Data Science Edwin Diday, Rong Guan, Gilbert Saporta, Huiwen Wang, 2020-01-09. Data science unifies statistics, data analysis, and machine learning to achieve a better understanding of the masses of data which are produced today and to improve prediction. Special kinds of data, symbolic, network, complex, compositional, are increasingly frequent in data science. These data require specific methodologies, but there is a lack of reference work in this field. *Advances in Data Science* fills this gap. It presents a collection of up-to-date contributions by eminent scholars following two international workshops held in Beijing and Paris. The 10 chapters are organized into four parts: Symbolic, Data, Complex, Data, Network, Data, and Clustering. They include fundamental contributions as well as applications to several domains, including business and the social sciences.

AI and Analytics for Smart Cities and Service Systems Robin Qiu, Kelly Lyons, Weiwei Chen, 2021-11-11. This book showcases state-of-the-art advances in service science and related fields of research, education, and practice. It presents emerging technologies and applications in contexts ranging from healthcare, energy, finance, and information technology to transportation, sports, logistics, and public services. Regardless of its size and service, every service organization is a service system. Due to the socio-technical nature of service systems, a systems approach must be adopted in order to design, develop, and deliver services aimed at meeting end users' utilitarian and socio-psychological needs alike. Understanding services and service systems often requires combining multiple methods to consider how interactions between people, technologies, organizations, and information create value under various conditions. The papers in this volume highlight a host of ways to approach these challenges in service science and are based on submissions to the 2021 INFORMS Conference on Service Science.
