A Step-by-Step Guide to Exploratory Factor Analysis with SPSS Marley W. Watkins, 2021-06-21 This is a concise easy to use step by step guide for applied researchers conducting exploratory factor analysis EFA using SPSS In this book Dr Watkins systematically reviews each decision step in EFA with screen shots and code from SPSS and recommends evidence based best practice procedures This is an eminently applied practical approach with few or no formulas and is aimed at readers with little to no mathematical background Dr Watkins maintains an accessible tone throughout and uses minimal jargon to help facilitate grasp of the key issues users will face while applying EFA along with how to implement interpret and report results Copious scholarly references and quotations are included to support the reader in responding to editorial reviews This is a valuable resource for upper level undergraduate and postgraduate students as well as for more experienced researchers undertaking multivariate or structure equation modeling courses across the behavioral medical and social sciences

Statistical Methods in Psychiatry and Related Fields Ralitza Gueorgieva, 2017-11-20 Data collected in psychiatry and related fields are complex because outcomes are rarely directly observed there are multiple correlated repeated measures within individuals there is natural heterogeneity in treatment responses and in other characteristics in the populations Simple statistical methods do not work well with such data More advanced statistical methods capture the data complexity better but are difficult to apply appropriately and correctly by investigators who do not have advanced training in statistics This book presents at a non technical level several approaches for the analysis of correlated data mixed models for continuous and categorical outcomes nonparametric

methods for repeated measures and growth mixture models for heterogeneous trajectories over time Separate chapters are devoted to techniques for multiple comparison correction analysis in the presence of missing data adjustment for covariates assessment of mediator and moderator effects study design and sample size considerations The focus is on the assumptions of each method applicability and interpretation rather than on technical details Features Provides an overview of intermediate to advanced statistical methods applied to psychiatry Takes a non technical approach with mathematical details kept to a minimum Includes lots of detailed examples from published studies in psychiatry and related fields Software programs data sets and output are available on a supplementary website The intended audience are applied researchers with minimal knowledge of statistics although the book could also benefit collaborating statisticians The book together with the online materials is a valuable resource aimed at promoting the use of appropriate statistical methods for the analysis of repeated measures data Ralitzia Gueorguieva is a Senior Research Scientist at the Department of Biostatistics Yale School of Public Health She has more than 20 years experience in statistical methodology development and collaborations with psychiatrists and other researchers and is the author of over 130 peer reviewed publications
