Proceedings of the ... International Conference on Offshore Mechanics and Arctic Engineering, 2006 **Structural Integrity of Offshore Wind Turbines** Transportation

Research Board,2011-09-02 TRB Special Report 305 Structural Integrity of Offshore Wind Turbines Oversight of Design Fabrication and Installation explores the U S Department of the Interior s Bureau of Ocean Energy Management Regulation and Enforcement BOEMRE approach to overseeing the development and safe operation of wind turbines on the outer continental shelf with a focus on structural safety The committee that developed the report recommended that in order to facilitate the orderly development of offshore wind energy and support the stable economic development of this nascent industry the United States needs a set of clear requirements that can accommodate future design development The report recommends that BOEMRE develop a set of requirements that establish goals and objectives with regard to structural integrity environmental performance and energy generation The committee found that the risks to human life and the environment associated with offshore wind farms are substantially lower than for other industries such as offshore oil and gas because offshore wind farms are primarily unmanned and contain minimal quantities of hazardous substances This finding implies that an approach with significantly less regulatory oversight may be taken for offshore wind farms Under this approach industry would be responsible for proposing sets of standards guidelines and recommended practices that meet the performance requirements established by BOEMRE The domestic industry can build on standards guidelines and practices developed in Europe where the offshore wind energy is further developed but will have to fill gaps such as the need to address wave and wind loadings encountered in hurricanes The report also includes findings and recommendations about the role that certified verification agents third party evaluators can play in reviewing packages of standards and project specific proposals

The Proceedings of the First (1990) European Offshore Mechanics Symposium Jin S. Chung,1990 Local Content Policies in the Oil and Gas Sector Silvana Tordo,Michael Warner,Osmel Manzano,Yahya Anouti,2013-07-22 A number of countries have recently discovered and are developing oil and gas reserves Policy makers in such countries are anxious to obtain the greatest benefits for their economies from the extraction of these exhaustible resources by designing appropriate policies to achieve desired goals One important theme of such policies is the so called local content created by the sector the extent to which the output of the extractive industry sector generates further benefits to the economy beyond the direct contribution of its value added through its links to other sectors While local content policies have the potential to stimulate broad based economic development their application in petroleum rich countries has achieved mixed results This paper describes the policies and practices meant to foster the development of economic linkages from the petroleum sector as adopted by a number of petroleum producing countries both in and outside the Organisation for Economic Co operation and Development Examples of policy objectives implementation tools and reporting metrics are provided to derive lessons of wider applicability The paper presents various conclusions for policy makers about the design of local content policies

Structural Safety and Reliability Naruhito Shiraishi,Masanobu Shinozuka,Yi-Kwei Wen,1998 **Process and Chemical Engineering** ,1994 **Dynamic Loading and Design of Structures** Andreas Kappos,2001-10-11 Until now information

on the dynamic loading of structures has been widely scattered No other book has examined the different types of loading in a comprehensive and systematic manner and looked at their significance in the design process The book begins with a survey of the probabilistic background to all forms of loads which is particularly important to dynamic loads and then looks at the main types in turn wind earthquake wave blast and impact loading The relevant code provisions Eurocode and UBC American are detailed and a number of examples are used to illustrate the principles A final section covers the analysis for dynamic loading drawing out the concepts underlying the treatment of all dynamic loads and the corresponding modelling techniques Throughout there is a focus on the modelling of structures rather than on classical structural dynamics
