Find $f \circ g$. (Example 3)

21. $f(x) = \frac{1}{x+1}$

$$g(x) = x^2 - 4$$

22. $f(x) = \frac{2}{x-3}$

$$g(x) = x^2 + 6$$

23. $f(x) = \sqrt{x+4}$

$$g(x) = x^2 - 4$$

24. $f(x) = x^2 - 9$

$$g(x) = \sqrt{x+3}$$

25. $f(x) = \frac{5}{x}$

$$g(x) = \sqrt{6-x}$$

26. $f(x) = -\frac{4}{x}$

$$g(x) = \sqrt{x+8}$$

27. $f(x) = \sqrt{x+5}$

$$g(x) = x^2 + 4x - 1$$

28. $f(x) = \sqrt{x-2}$

$$g(x) = x^2 + 8$$

Problem Solving in Engineering Larry A. Glasgow, 2025-03-04 Bring mathematical principles to bear on engineering problems with this updated text The evolution of industrial processes has resulted in greater emphasis upon analytical and numerical problem solving Process improvement through experimentation is impractical and consequently engineers must rely upon computational and technical analysis Furthermore the ease with which time series data can be collected and processed has made harmonic signal interpretation routine Thus the ability of engineers to analyze model compute and interpret process phenomena is crucial to professional practice Problem Solving in Engineering meets these needs with a foundational introduction to mathematical techniques in applied sciences and engineering Incorporating examples from a range of scientific fields it communicates principles that can be adapted to many hardware software combinations Now fully updated to reflect the latest research and applications it remains an essential tool for engineers and applied scientists everywhere Readers of the second edition will also find Extensive time devoted to problem formulation Detailed discussion of integro differential equations and the processing and analysis of time series data The use of vorticity transport for the solution of momentum heat and mass transfer problems in two dimensions Examples and problems drawn from aviation telegraphy structural failures railroad operation chemical processes automatic process control seismology neutron diffusion gravitation and quantum theory Many additional narrative type exercises written to appeal to students who find problems in context better suited to their learning style Solutions manual available for qualified instructors Problem Solving in Engineering is ideal for advanced undergraduate graduate students and technical professionals in the physical sciences specifically chemical civil biochemical electrical and mechanical engineering as well as physics chemistry and biology

Power Series Solutions to Nonlinear Ordinary Differential Equations and Related Problems of Physics, Engineering, and Life Sciences Nathaniel S. Barlow, Steven J. Weinstein, 2025-10-09 This book is the first to offer a systematic methodology for solving nonlinear ordinary

differential equations via power series specifically those arising in mathematical physics It provides tools to eliminate the tedious manipulation of infinite series enabling recursive computation of all terms The authors also present a structured approach to overcoming convergence issues inherent to such methods demonstrating that power series solutions can be both accessible and practical The authors teaching philosophy that mathematics is best learned by doing is reflected throughout with the text largely composed of idea driven examples and physically motivated problems from their own research Proofs are included only when necessary for readers to construct custom theorems or definitions relevant to real world applications Ultimately the book shows that power series methods can effectively complement numerical techniques offering applied mathematicians a powerful and versatile toolset This book is intended for researchers engaged in applied mathematics and is structured so it can be used in a one semester advanced undergraduate or graduate course Necessary course prerequisites are a knowledge of differential equations analytical and numerical methods linear algebra and complex variables
