

Standing Waves

Let's assume that electromagnetic waves travel a way for trapped between two mirrors. There are standing waves.

A jump rope is a good example of a standing wave.

The jump is made negative going down to form a downward loop and then goes upward to the wave. Jump rope forms two other loops.

The places of zero-amplitude are called nodes. The places of greatest amplitude are called antinodes.

A standing wave

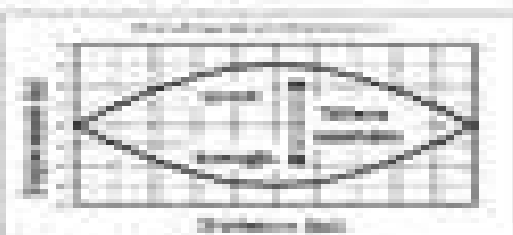

Standing waves are created by interference between two waves, so we show both the wave that the wave is the wave that is made. Though, it is a wave going up and down, just like a jump rope.

In a standing wave, each antinode is one-half of a wavelength.

$$1 \text{ Antinode} = \frac{1}{2} \lambda$$

$$2 \text{ Antinodes} = \lambda$$

Two standing waves (the wave pattern) are shown below. Notice that the wave is not moving to the right or to the left, but it is moving up and down, just like a jump rope.

A graph of the fundamental wave for a standing wave

The longest wave that can be produced in a certain distance is called the fundamental. It is one-half of one wavelength long.

Standing Waves

Standing waves occur between objects whose distance is equal to the wavelength. Standing waves occur in the atmosphere. Standing waves occur in the ocean. Standing waves occur in the ground. Standing waves occur in the air.

Standing Waves in a Tube

Standing waves in a tube are created by the interference of two waves. The wavelength of the standing wave is equal to the length of the tube. The frequency of the standing wave is equal to the frequency of the waves.
