

Ships design for energy efficiency

Some examples of technology innovations expected to be adopted through effective EEDI and SEEMP implementation include speed reduction, weather routing, use of auxiliary power and a focus on aerodynamics (see Figure 1). Speed reduction presents the largest opportunities for reductions in fuel consumption and CO₂ emissions, because it can simultaneously optimise engine efficiency and reduce hydrodynamic and aerodynamic loads. Optimisation of maintenance and operational practices, such as regular propeller and hull cleaning, can also reduce power requirements.

Figure 1. Potential fuel use and CO₂ reductions from various efficiency approaches for ships (International Council on Clean Transportation (ICCT), July 2015). <http://www.icct.org/publications/for-researchers/shipping/efficiency-reducing-the-emissions-of-transport-loading-practices>

Technical measures that reduce fuel consumption in a cost-efficient way have resulted in highly efficient marine engines and power trains, optimized flow profiles around Hull cleaning & coating (1-10%), rudder/ propeller (1-6%), and innovations for water flow optimization such as bulbous bow & stern construction (1-4%). For engine efficiency, waste heat recovery (6-8%), modern engine controls technologies (0-1%), engine common rail mechanism (0-1%). Still, it is not unusual for individual ships to consume up to 30% more fuel than necessary due to imperfect design, badly used propulsive arrangements, or a poorly maintained hull and propeller. High expectations of improved energy performance from technical improvements are also found in a report for the Marine Environment Protection Committee of IMO, which estimates that design measures could potentially reduce CO₂ emissions by 10% to 50% per transport work.

Knowledge of the fuel-saving potential of technical measures related to hull and propeller geometry, hull construction, propulsion machinery, auxiliary machinery and equipment, heat recovery, cargo handling, and alternative energy sources is, in general, good within the industry. There is a long tradition of development and research in these areas and the improvement potential is estimated to be, on average, a few per cent of fuel savings in each category. A remaining challenge is to increase knowledge of how the different technical systems on a ship affect one other. Such knowledge is needed in order to enhance waste heat recovery or efficiently reduce the use of electricity on board, which are highly effective measures for overall energy economy. Use of High Voltage system onboard ships and electrical propulsion also can play a major role for reduction of fuel consumption and can potentially reduce CO₂ emissions.

The Ecological Rift John Bellamy Foster, Brett Clark, Richard York, 2011-11-01 Humanity in the twenty first century is facing what might be described as its ultimate environmental catastrophe the destruction of the climate that has nurtured human civilization and with it the basis of life on earth as we know it All ecosystems on the planet are now in decline Enormous rifts have been driven through the delicate fabric of the biosphere The economy and the earth are headed for a fateful collision if we don't alter course In *The Ecological Rift: Capitalism's War on the Earth* environmental sociologists John Bellamy Foster Brett Clark and Richard York offer a radical assessment of both the problem and the solution They argue that the source of our ecological crisis lies in the paradox of wealth in capitalist society which expands individual riches at the expense of public wealth including the wealth of nature In the process a huge ecological rift is driven between human beings and nature undermining the conditions of sustainable existence a rift in the metabolic relation between humanity and nature that is irreparable within capitalist society since integral to its very laws of motion Critically examining the sanguine arguments of mainstream economists and technologists Foster Clark and York insist instead that fundamental changes in social relations must occur if the ecological and social problems presently facing us are to be transcended Their analysis relies on the development of a deep dialectical naturalism concerned with issues of ecology and evolution and their interaction with the economy Importantly they offer reasons for revolutionary hope in moving beyond the regime of capital and toward a society of sustainable human development

Generating Electricity in a Carbon-Constrained World Fereidoon Sioshansi, 2009-10-21 The electric power sector is what keeps modern economies going and historically fossil fuels provided the bulk of the energy need to generate electricity with coal a dominant player in many parts of the world Now with growing concerns about global climate change this historical dependence on fossil fuels especially those rich in carbon are being questioned Examining the implications of the industry's future in a carbon constrained world a distinct reality is the subject of this book Containing contributions from renowned scholars and academics from around the world this book explores the various energy production options available to power companies in a carbon constrained world The three part treatment starts with a clear and rigorous exposition of the short term options including Clean Coal and Carbon Capture and Sequestration Technology Coal and Emission trading Renewable energy options such as Nuclear Energy Wind power Solar power Hydro electric and Geothermal energy are clearly explained along with their trade offs and uncertainties inherent in evaluating and choosing different energy options and provides a framework for assessing policy solutions This is followed by self contained chapters of case studies from all over the world Other topics discussed in the book are Creating markets for tradable permits in the emerging carbon era Global Action on Climate Change The Impossibility of Staunching World CO₂ Emissions and Energy efficiency Clearly explains short term and long term options Contributions from renowned scholars and academics from around the world Case studies from all over the world

A Question of Balance William Nordhaus, 2014-10-01 How economic analysis can help us design economic policies to address the looming challenges of global warming As scientific and observational evidence on global warming piles up every day questions of economic policy in this central environmental topic have taken center stage But as author and prominent Yale economist William Nordhaus observes the issues involved in understanding global warming and slowing its harmful effects are complex and cross disciplinary boundaries For example ecologists see global warming as a threat to ecosystems utilities as a debit to their balance sheets and farmers as a hazard to their livelihoods In this important work William Nordhaus integrates the entire spectrum of economic and scientific research to weigh the costs of reducing

emissions against the benefits of reducing the long run damages from global warming The book offers one of the most extensive analyses of the economic and environmental dynamics of greenhouse gas emissions and climate change and provides the tools to evaluate alternative approaches to slowing global warming The author emphasizes the need to establish effective mechanisms such as carbon taxes to harness markets and harmonize the efforts of different countries This book not only will shape discussion of one the world s most pressing problems but will provide the rationales and methods for achieving widespread agreement on our next best move in alleviating global warming *Sustainable Program Management* Gregory T Haugan, 2013-10-07 The world is undergoing major transitions due to changes in three driving forces population climate and energy resources making it essential for us to achieve sustainability in the implementation of projects and programs as well as our everyday life This book provides essential information on the three major driving forces of the coming decades and presents options to assist us in moving toward a sustainable future It uses a format that makes it easy to understand and apply to medium and long range planning **Green Taxation in East Asia** Richard Cullen, Jefferson Vanderwolk, Yan Xu, 2011 The broad sweep of green taxation pollution carbon resource and land taxes and tax incentives for environmental goals makes it complex to analyse Green Taxation in East Asia is a timely and valuable comparative contribution to an expanding literature Its scholarly country studies show how green taxes aim to modify behaviour correct externalities regulate or raise revenue As environmental policy and tax policy move closer together green taxes become feasible but are always as the editors say shaped by local political economic and social circumstances Miranda Stewart University of Melbourne Australia In today s world environmental challenges grow apace and the impact of taxation measures on these will prove critical Green Taxation in East Asia addresses those challenges It draws on world wide experiences including those from North America and the EU by analysing and critiquing how green taxation can inform develop and implement environmental policies in East Asia and beyond This is not a sterile tax debate The authors of this work all leading scholars in their respective jurisdictions combine economic social and local political perspectives on what should work and what should not The debate is too important to ignore in a world where Kyoto seems a long way from Washington the fragrant harbour is no longer and even in the lands down under long white clouds and pristine beaches are no longer taken for granted Taxation is not a panacea for curing environmental ills but it is as this book admirably shows part of the answer Andrew Halkyard University of Hong Kong The right of East Asia to grow its economy and provide its citizens with living standards enjoyed elsewhere is as undeniable as the risk to the global environment from this growth A volume that contrasts current initiatives in China and Hong Kong to reduce that risk with lessons from international experience presented by leading international experts from four continents is more than just timely it can make a key contribution to the development of contemporary thinking on taxation and the environment This work fits the bill perfectly Rick Krever Monash University Australia The authors of the jurisdictional chapters in this book are of necessity more focussed on analyzing the

interaction today between taxation and related fiscal measures and the environment From these studies it is clear that a great deal is amiss in the way this interface works at present across all the jurisdictions under review But this research also shows positive steps being taken and great scope for further positive tax policy development We can see from this research how smart policy innovation can start right now and also how it can build better foundations for the introduction of more comprehensive globally effective policy frameworks such as those advanced by Hansen and Sandor Time is of the essence The scholarship in this volume shows that lawyers and tax experts are engaged in finding solutions Can green taxation make a difference The answer is a resounding yes From the foreword by Christine Loh The core concern of this book is the potential use of taxation and related measures to foster climate helpful large scale change within East Asia The contributing authors examine key issues such as how Greater China for instance confronts severe environmental problems which are a direct product of several decades of remarkable economic growth The detailed analysis in this book identifies a range of green taxation guidelines for East Asia as it seeks to drive down striking levels of environmental degradation and tackle the climate change challenge Addressing an important need in the public policy debate this book will appeal to academics students government policymakers regulators and practitioners in environmental law taxation law and policy as well as comparative environmental law and comparative taxation law and policy Public policy commentators and journalists with an interest in the above areas will also find this book worthwhile and informative

Reaching an International Agreement on Climate Change Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-07-08 The agreement of the Bali roadmap charted a course for negotiations on a successor agreement to the Kyoto Protocol when it expires in 2012 But there remain uncertainties about the pace and eventual outcome of the negotiations A post 2012 agreement will only be a success if it is guided by the science which warns that developed countries must reduce emissions by 25 40 per cent by 2020 and 80 95 per cent by 2050 These figures only translate to a 50 50 chance of avoiding dangerous climate change and the international community should aspire to even greater reductions Most developing countries are not required to reduce emissions but will need to commit to certain actions that will limit the growth of and eventually stabilise their emissions The Committee believes that the targets for developed countries and commitment to actions by developing countries are the minimum that the UK and EU should accept in the negotiations Diplomacy will be key in helping to reach agreement on the effort required The Government will have to work closely with developing countries to explore the actions that they might be willing to commit to The post 2012 agreement can be more flexible and creative than its predecessor in responding to the different needs of different countries It is clear that substantial developed country financing will be required in order to shift developing countries onto a low carbon path and also to encourage them to agree to mitigation actions

Environmental and Economic Sustainability Paul E. Hardisty, 2010-06-21 Never before has the quest to balance the needs of people the environment and the economy been so important While sustainability has been widely taken up by governments and business the world has continued to move in increasingly unsustainable directions from continued dependence on fossil energy to rising greenhouse gas emissions and erosion

Climate Politics as Investment Simon Wolf, 2013-05-23 Simon Wolf describes how the growing awareness for the economic consequences of climate change and the economic opportunities of climate protection has led to changes in the rationality of governing climate change from reducing emissions to building low carbon economies One crucial strategy for governments in orchestrating the transformation to cleaner economies is to enable low carbon investment The author therefore takes a critical look at how climate governance is reframed as an economic and investment challenge in recent years and reveals some of the blind spots of focusing on the economic and investment opportunities related to climate protection

The 2007 pre-Budget report and comprehensive spending review Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-03-05 Environmental taxes as a proportion of all taxation peaked at 9.7 per cent in 1999 and have declined ever since falling to 7.3 per cent in 2006 This report sets out a number of conclusions and recommendations covering different areas of environmental policy

- 1 Aviation the reform of Air Passenger Duty into a levy per flight rather than per passenger is welcome but tax on aviation must be significantly increased so as to stabilise demand and resulting emissions
- 2 Motoring road transport emissions in England increased by 12 per cent between 1997 and 2006 and are forecast to increase so it is important for the Budget to put in place rises in fuel duty
- 3 Carbon capture and storage the Treasury must provide more assistance for the development of this technology in the UK
- 4 Shadow price of carbon this should be increased to discourage the approval of carbon intensive policies and projects and so improve the prospects of achieving the reduction in global emission targets
- 5 Environmental transformation fund the Pre Budget report Cm 7227 ISBN 9780101722728 announced funding for such a fund with 370 million to be spent over three years but only 170 million was new money
- 6 Emissions trading it must be clear when reported emissions figures incorporate the purchase of carbon credits otherwise they will give a false picture of the decarbonisation progress within the UK
- 7 Public service agreements the new PSA is too diffuse with no clear departmental targets for reducing emissions the Government should consider setting emissions reduction targets for specific sectors of the economy The Treasury has not responded on the scale or with the urgency recommended by the Stern Review ISBN 9780102944204 and the 2008 Pre Budget report needs to establish a coherent set of measures to help deliver the UK's 2020

domestic and EU targets on emissions and renewable energy
