wishes to grasp the fundamental principles behind those methods The authors do not assume familiarity with Monte Carlo techniques such as random variable generation with computer programming or with any Markov chain theory the necessary concepts are developed in Chapter 6 A solutions manual which covers approximately 40% of the problems is available for instructors who require the book for a course Christian P Robert is Professor of Statistics in the Applied Mathematics Department at Universit Paris Dauphine France He is also Head of the Statistics Laboratory at the Center for Research in Economics and Statistics CREST of the National Institute for Statistics and Economic Studies INSEE in Paris and Adjunct Professor at Ecole Polytechnique He has written three other books and won the 2004 DeGroot Prize for The Bayesian Choice Second Edition Springer 2001 He also edited Discretization and MCMC Convergence Assessment Springer 1998 He has served as associate editor for the Annals of Statistics Statistical Science and the Journal of the American Statistical Association He is a fellow of the Institute of Mathematical Statistics and a winner of the Young Statistician Award of the Soci t de Statistique de Paris in 1995 George Casella is Distinguished Professor and Chair Department of Statistics University of Florida He has served as the Theory and Methods Editor of the Journal of the American Statistical Association and Executive Editor of Statistical Science He has authored three other textbooks Statistical Inference Second Edition 2001 with Roger L Berger Theory of Point Estimation 1998 with Erich Lehmann and Variance Components 1992 with Shayle R Searle and Charles E McCulloch He is a fellow of the Institute of Mathematical Statistics and the American Statistical Association and an elected fellow of the International Statistical Institute
