Statistics Through Applications Dan Yates, Daren S. Starnes, David S. Moore, 2004-03 The NCTM urges the study of statistics in high school and many schools have designed courses based on these NCTM recommendations Now from the authors of the overwhelming favorite for the AP Statistics course *The Practice of Statistics* comes the first text written exclusively for a non AP level high introduction to statistics for high school students *Statistics Through Applications* is the ideal alternative for juniors and seniors not going into high level courses such as calculus but who are interested in an introduction to the important topics of statistics The book's data analysis approach moves students away from monotonous computation to focus on the statistical thinking behind data gathering and interpretation This approach more accurately reflects the way working statisticians contribute to our understanding of the world It also helps students be more discerning consumers of statistics teaching them to look closely at what the numbers from surveys election polls and medical studies are really saying State Correlations http://www.bfwpub.com/pdfs/yatessta_state.htm *Statistics Through Applications* Daren S. Robust Statistics Through the Monitoring Approach Anthony C. Atkinson, Marco Riani, Aldo Corbellini, Domenico Perrotta, Valentin Todorov, 2025-07-26
This open access book presents robust statistical methods and procedures through the monitoring approach with an emphasis on applications to linear regression. Illustrating the theory it explores both large and small sample properties. The performance of the forward search and of the monitoring of static robust estimators for regression data are illuminated through numerous data analyses using MATLAB and R. The book describes the results of many years work of the authors in the development of powerful methods of robust regression analysis. Robust methods are designed to analyse contaminated data. The well established static robust methods estimate model features such as parameter estimates assuming the amount of contamination in the data is known. These methods are described in detail in Chapter 2 for estimation in a simple sample. The extension to regression is presented in Chapter 3 with an emphasis on S estimation and related procedures as well as on least trimmed squares. The monitoring methods of Chapter 4 including the forward search find the appropriate level of robustness for each data set and so avoid biased estimation from the inclusion of outliers and inefficiency due to the deletion of uncontaminated observations. This analysis is followed by examples which illustrate the use of the interactive graphical analyses associated with the authors FSDA toolbox. Numerical comparisons of the size and power of outlier tests appear in Chapter 5. Later chapters illustrate applications to response transformation in regression and to non parametric regression. Extensions of the robust multiple regression model include Bayesian heteroskedastic time series and compositional regression together with the clustering of regression models. Finally several approaches to model selection are investigated and robust analyses of regression data are presented that illustrate the use of the techniques introduced earlier. Exercises are given at the end of each chapter with solutions at the end of the book. The MATLAB code can be reproduced using MATLAB Online without the need for a license or via the language agnostic Jupyter notebook environment after installing the MATLAB kernel. Online computer code is available for all examples and exercises together with a series of YouTube videos. Aimed at professional statisticians and researchers concerned with insightful data analysis as well as postgraduate students the book may also serve as a text for a modern interactive robust regression course.
