Roadside Design Guide American Association of State Highway and Transportation Officials. Task Force for Roadside Safety, 2011 The Roadside Design Guide presents a synthesis of current information and operating practices related to roadside safety and is written in dual units metric and U S Customary This book is a guide It is not a standard nor is it a design policy It is intended to use as a resource document from which individual highway agencies can develop standards and policies Although much of the material in the guide can be considered universal in its application several recommendations are subjective in nature and may need modification to fit local conditions However it is important that significant deviations from the guide be based on operational experience and objective analysis The 2011 edition of the AASHTO Roadside Design Guide has been updated to include hardware that has met the evaluation criteria contained in the National Cooperative Highway Research Program NCHRP Report 350 Recommended Procedures for the Safety Performance Evaluation of Highway Features and begins to detail the most current evaluation criteria contained under the Manual for Assessing Safety Hardware 2009 MASH For the most part roadside hardware tested and accepted under older guidelines that are no longer applicable has not been excluded in this edition AASHTO website *Recovery System Design Guide* E. G. Ewing, H. W. Bixby, T. W. Knacke, Irvin Industries Inc. California Division, 1979 This document serves as the third revision of the USAF Parachute Handbook which was first published in 1951 The data and information represent the current state of the art relative to recovery system design and development The initial chapters describe representative recovery applications components subsystems material manufacture and testing The final chapters provide empirical data and analytical methods useful for predicting performance and presenting a definitive design of selected components into a reliable recovery system

**Manuals Combined: DoD Security Engineering Facilities Planning; Design Guide For Physical Security Of Buildings; Antiterrorism Standards For Buildings And Specifications For Active Vehicle Barriers** , Over 1 600 total pages Application and Use Commanders security and antiterrorism personnel planners and other members of project planning teams will use this to establish project specific design criteria for DoD facilities estimate the costs for implementing those criteria and evaluating both the design criteria and the options for implementing it The design criteria and costs will be incorporated into project programming documents **Risk Management Series; Design Guide for Improving School Safety in Earthquakes, Floods, and High Winds** , **Design Guide for Improving School Safety in Earthquakes, Floods, and High Winds** , 2004 This manual is intended to provide guidance for the protection of school buildings and their occupants from natural disasters and the economic losses and social disruption caused by building damage and destruction This volume concentrates on grade schools K 12 This publication covers earthquakes floods and high winds Its intended audience is design professionals and school officials involved in the technical and financial decisions of school construction repair and renovations This publication stresses that identification of hazards and their frequency and careful consideration

of design against hazards must be integrated with all other design issues and be present from the inception of the site selection and building design process Chapters 1 3 present issues and background information that are common to all hazards Chapters 4 6 cover the development of specific risk management measures for each of the three main natural hazards Chapter 1 opens with a brief outline of the past present and future of school design Chapter 2 introduces the concepts of performance based design in order to obtain required performance from a new or retrofitted facility Chapter 3 introduces the concept of multihazard design and presents a general description and comparison of the hazards including charts that show where design against each hazard interacts with design for other hazards Chapters 4 5 and 6 outline the steps necessary in the creation of design to address risk management concerns for protection against earthquakes floods and high winds respectively A guide to the determination of acceptable risk and realistic performance objectives is followed by a discussion to establish the effectiveness of current codes to achieve acceptable performance A list of acronyms used in the manual are appended Contains 13 tables and 124 figures

**Guidelines for the Design of Footbridges** fib Fédération internationale du béton, 2005-01-01 The intention of fib Bulletin 32 is to present guidelines for the design of footbridges as well as bridges accommodating cyclists and bridleways equestrian paths The need for these guidelines comes from the fact that structural engineers designing footbridges currently have to spend considerable time and energy collecting information from numerous documents codes and recommendations to make design decisions There seems to be no international document dedicated solely to the design of footbridges These guidelines attempt to provide a concentrated source of information regarding all design issues specific to footbridges It is meant to be a liberal document in the sense that it promotes new innovative and bold yet prudent designs by sharing the experience of the authors summarizing specifications given in codes and presenting a collection of examples of well designed structures or structural details from around the world It is not intended to be an international code that specifies limits and admissible values thus encouraging timid conservative designs that are repetitions of approved and tested designs Indeed it may be the very fact that no international code exists specifically for footbridges that encourages the wide variety of footbridge designs found today It should be noted that numerous guidelines codes and books have been published on bridge design in general Information given in those publications that is also applicable to footbridges is not repeated in Bulletin 32 The chapters of these guidelines all follow the same pattern an introduction to the subject general guidelines as well as do's and don'ts a summary of information found in existing international codes recommendations experience of the authors and built examples with comparison and comments on this information examples Plenty of illustrations and photographs help to visualize the themes of this work The last chapter Case Studies contains footbridges each with a short summary of main structural data and references for further reading
