

3.1.2.4. Mono- slope

Mono-Slope or single-slope framing system is an alternative to gable type of frame that may be either Clear Span or multi-span. Mono-Slope configuration results in more expensive framing than the gable type.

Mono-Slope framing system is frequently adopted where:

- i) Rainwater needs to be drained away from the parking areas or from the adjacent buildings
- ii) Larger headroom is required at one sidewall
- iii) A new building is added directly adjacent to an existing building and it is required to avoid:
 - The creation of a valley condition along the connection of both buildings.
 - The imposition of additional loads on the columns and foundations of the existing building.

For larger widths "mono-slope-multi-span" framing will be more economical when column free area inside the building is not an essential requirement.

3.1.2.5. Space Saver

Space Saver framing system offers straight columns, keeping the rafter bottom flange horizontal for ceiling applications with rigid knee connection. Selection of Space Saver is appropriate when:

- i) The frame width is between 6m to 18m and eave height does not exceed 6m.
- ii) Straight columns are desired.
- iii) Roof slope of $\leq 0.5:10$ are acceptable.
- iv) Customer requires minimum air volume inside the building especially in cold storage ware houses.
