Dwivedi,Alok K. Verma,John E. Sneckenberger,2012-12-06 Flexibility is as acceptable an objective for today s industrial community as is automation Thus the title of this conference proceedings volume Flexible Automation reflects an added emphasis to the usual industrial automation As with general automation that has impacted every component of the manufacturing office and plant the identity of flexible automation can possess various forms and functions The papers in this volume have been grouped into two main categories One category deals with implementation of so called intelligent manufacturing This means use of algorithmic methods and artificial intelligence approaches to various problems encountered in practical factory automation tasks The placement of papers into five chapters of this part cannot be very precise due to multidisciplinary nature and constant rapid change of the field The categories are arranged starting from problems of enhancement of current factory settings and followed by the papers addressing more specific issues of production planning process technology and product engineering The fifth chapter contains papers on the very important aspects of factory automation problems of design simulation operation and monitoring of manufacturing cells *Microprocessor-Based Control Systems* N.K. Sinha,2012-12-06 Recent advances in LSI technology and the consequent availability of inexpensive but powerful microprocessors have already affected the process control industry in a significant manner Microprocessors are being increasingly utilized for improving the performance of control systems and making them more sophisticated as well as reliable Many concepts of adaptive and learning control theory which were considered impractical only 20 years ago are now being implemented With these developments there has been a steady growth in hardware and software tools to support the

microprocessor in its complex tasks With the current trend of using several microprocessors for performing the complex tasks in a modern control system a great deal of emphasis is being given to the topic of the transfer and sharing of information between them Thus the subject of local area networking in the industrial environment has become assumed great importance The object of this book is to present both hardware and software concepts that are important in the development of microprocessor based control systems An attempt has been made to obtain a balance between theory and practice with emphasis on practical applications It should be useful for both practicing engineers and students who are interested in learning the practical details of the implementation of microprocessor based control systems As some of the related material has been published in the earlier volumes of this series duplication has been avoided as far as possible
