Universite Of Qwaqwa Application Forms For 2015:

Sustainable Futures in Southern Africa's Mountains Andrea Membretti, Sue Jean Taylor, Jess L. Delves, 2023-01-30

This open access book presents multiple disciplinary perspectives on the challenges and opportunities for sustainable development in the South African mountain city of Phuthaditjhaba. These challenges are embedded in the complex environmental, socio-cultural and political contexts of the region. Established as the capital of the QwaQwa homeland under Grand Apartheid, this city is now home to between 400 000-700 000 people but in many areas lacks formal infrastructure and services. Each chapter of this volume addresses a different aspect of the city's development and all take the UN Sustainable Development Goals as a common framework to guide their reflections on potential sustainable futures for Phuthaditjhaba. While the circumstances in Phuthaditjhaba will be familiar to many researchers of informal and growing cities in developing regions, the mountain setting of the city brings its own set of challenges and opportunities linked to the rugged and steep terrain, remoteness and natural resources. This book serves to showcase the diverse research taking place in this emerging mountain city and provide reflections on how a sustainable future can be ensured for its environment and inhabitants.

Agro-Environmental Sustainability Jay Shankar Singh, Gamini Seneviratne, 2017-02-14. This two-volume work is a testament to the increasing interest in the role of microbes in sustainable agriculture and food security. Advances in microbial technologies are explored in chapters dealing with topics such as carbon sequestration, soil fertility management, sustainable crop production and microbial signaling networks. Volume I is a collection of research findings that invites readers to examine the application of microbes in reinstating degraded ecosystems and also in establishing sustainable croplands. Highly readable entries attempt to close the knowledge gap between soil microbial associations and sustainable agriculture. An increase in the global population with changing climate is leading to environments of various abiotic and biotic stresses for agricultural crops. It therefore becomes important to identify the techniques to improve soil fertility and function using different microbial groups such as actinobacteria, microalgae, fluorescent pseudomonads and cyanobacterial systems. These are examined in this volume in greater detail. This work is a significant contribution to research in this increasingly important discipline and will appeal to researchers in microbiology, agriculture, environmental sciences and soil and crop sciences.
