University Cut Off Points 2015:

Higher Education, Meritocracy and Inequality in China Ye Liu, 2016-10-08 This book investigates the changing opportunities in higher education for different social groups during China's transition from the socialist regime to a market economy. The first part of the book provides a historical and comparative analysis of the development of the idea of meritocracy since its early origins in China and in more recent western thought. The second part then explores higher education reforms in China, the part played by supposedly meritocratic forms of selection and the implications of these for social mobility. Based on original empirical data, Ye Liu sheds light on the socio-economic, gender and geographical inequalities behind the meritocratic facade of the Gaokao. Liu argues that the Chinese philosophical belief in education-based meritocracy had a modern makeover in the Gaokao and that this ideology induces working class and rural students to believe in upward social mobility through higher education. When the Gaokao broke the promise of status improvement for rural students, they turned to the Chinese Communist Party and sought political connections by actively applying for its membership. This book reveals a bleak picture of visible and invisible inequality in terms of access to and participation in higher education in contemporary China. Written in an accessible style, it offers a valuable resource for researchers and non-specialist readers alike.

Higher Education in Russia Yaroslav Kuzminov, Maria Yudkevich, 2022-09-13 A comprehensive up-to-date look at modern Russian higher education. By the mid-eighteenth century, when the first university appeared in Russia, many European nations could boast of long and glorious university traditions. But Russia, with its poorly developed system of elementary and secondary education, lagged behind other European countries and seemed destined for a long spell of second-tier performance. Yet by the mid-twentieth century, the fully reformed system of Soviet higher education was perceived as an unexpected success, one that transformed the country into a major scientific power throughout the Cold War. Today, the international community is keeping close tabs on the fast development of world-class higher education in Russia, specifically its large-scale changes and reforms. *Higher Education in Russia* is the first comprehensive up-to-date overview and analysis of modern Russian higher education. Aimed at a large international audience, it describes the current realities of higher education in Russia as well as the main principles, logic, and relevant historical and cultural factors. Outlining the evolution of the higher education system in tsarist Russia throughout the nineteenth century, Yaroslav Kuzminov and Maria Yudkevich describe the development of its mass-scale higher education system from the end of the Second World War to the collapse of the Soviet Union and beyond. They also discuss the principal elements of today's Russian higher education system while exploring the system's governance model and the logic of its resource allocation. They touch on university selection, the structure of the country's academic profession, the organization of research, and the major excellence programs of leading universities. Illustrating the idea that the development of the higher education system is very much linked with the European experience, the authors argue that Russian higher education was often the domain of successful and not so successful
