

FLUOROMETER

A fluorometer is a scientific instrument used to measure the intensity and wavelength distribution of fluorescence emitted by a sample. Fluorescence occurs when a substance absorbs light at a specific wavelength and then emits light at a longer wavelength. This phenomenon is widely used in various fields such as biochemistry, molecular biology, environmental science, and materials science for analyzing the properties and concentrations of fluorescent substances. Fluorometers typically consist of a light source to excite the sample, optical filters to select the desired wavelengths, a sample holder, and a detector to measure the emitted fluorescence. They are valuable tools for studying the characteristics of fluorescent molecules, including proteins, nucleic acids, dyes, and other compounds.
