Teaching Number in the Classroom with 4-8 Year Olds Ann K Stafford, 2006-01-05 This user friendly resource presents an inquiry based approach to classroom instruction and covers beginning number and early counting strategies as well as multi digit addition subtraction multiplication and division

Teaching Number Robert J Wright, Garry Stanger, Ann K Stafford, James Martland, 2006-08-30 The book lets teachers identify where their students are in terms of number skills and sets out a strategy for developing their knowledge The authors show how to advance children s learning across five stages of early arithmetical learning emergent perceptual figurative initial number and facile number This provides for increasingly sophisticated number strategies across addition subtraction multiplication and division as well as developing children s number word and numeral knowledge and their

ability to structure number and have grouping strategies The approach used nine guiding principles for teaching Each chapter has clearly defined teaching procedures which show how to take the children onto the next more sophisticated stage The teaching procedures are organized into key teaching topics and each includes a clearly defined purpose detailed instructions activities learning tasks and reinforcing games lists of responses which children may make application in whole class small group and individualised settings a link to the Learning Framework in Number see Early Numeracy second edition 2005 how the guiding principles for teaching can be used to allow teachers to evaluate and reflect upon their practice Primary practitioners in Australia the United States the United Kingdom and Canada have tested the teaching procedures which can be used in conjunction with each country s numeracy strategy Primary teachers especially of the early years mathematics co ordinators heads of school mathematics advisers special educationalists learning support personnel teacher assistants lecturers in initial teacher training and educational psychologists will all find this book invaluable *International Reflections on the Netherlands Didactics of Mathematics* Marja van den Heuvel-Panhuizen, 2019-08-13 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions takes readers on a journey with mathematics education researchers developers and educators in eighteen countries who reflect on their experiences with Realistic Mathematics Education RME the domain specific instruction theory for mathematics education developed in the Netherlands since the late 1960s Authors from outside the Netherlands discuss what aspects of RME appeal to them their criticisms of RME and their past and current RME based projects It is clear that a particular approach to mathematics education cannot simply be transplanted to another country As such in eighteen chapters the authors describe how they have adapted RME to their individual circumstances and view on mathematics education and tell their personal stories about how RME has influenced their thinking on mathematics education Developing Number Knowledge Robert J Wright, David Ellemor-Collins, Pamela D Tabor, 2011-11-04 Following the great success of the earlier books this fourth book in the Mathematics Recovery series equips teachers with detailed pedagogical knowledge and resources for teaching number to 7 to 11 year olds Drawing on extensive programs of research curriculum development and teacher development the book offers a coherent up to date approach emphasising computational fluency and the progressive development of students mathematical sophistication The book is organized in key domains of number instruction including structuring numbers 1 to 20 knowledge of number words and numerals conceptual place value mental computation written computation methods fractions and early algebraic reasoning Features include fine grained progressions of instruction within each domain detailed descriptions of students strategies and difficulties assessment tasks with notes on students responses classroom ready instructional activities This book is designed for classroom and intervention teachers special education teachers and classroom assistants The book is an invaluable resource for mathematics advisors and coaches learning support staff numeracy consultants curriculum developers teacher educators and researchers **Learning Disabilities** Pol

Ghesquière, A. J. J. M. Ruijsenaars, 2005 Research on learning disabilities has known a tremendous growth the last 25 years Yet despite the progress that is made in diverse domains learning disabilities still stay a serious challenge to teaching and instruction In this book the authors try to link original research findings on learning disabilities with instructional methods and teaching practices The first part of the book brings together contributions about the cognitive metacognitive and socio emotional correlates of learning disabilities These factors generally form a core aspect of the challenge of learning disabilities to teaching and instruction The first three chapters concern the phenomenon of dyslexia Van den Broeck critically evaluates the disputable role of intelligence in the concept and definition of dyslexia Hutchinson Whiteley and Smith explore the role of cognitive linguistic skills in the early identification of reading problems in emergent bilingual children Van Ingelghem and colleagues study auditory temporal processing in children with dyslexia In chapter 4 Desoete and Roeyers summarize their research on metacognition in children with mathematics learning disabilities Finally Gadeyne Ghesquière and Onghena explore the relationship between academic achievement and behaviour problems The second part of this book goes deeper into research on intervention and instruction methods The first three chapters focus on reading problems Whitely and her colleagues try to analyze why some children do not benefit from early phonologically based interventions leading to implications for the development of early screening tools and intervention schemes for these non beneficiaries Van Kraaenord Rohl and Rivalland report findings of an Australian study examining the programs and strategies used to teach and intervene in Australian classrooms for students with learning problems Bouwer and Jordaan argue for the use of imaging as a learning support technique for children with dyslexia The last two chapters explore the differential effect of direct and guided instruction for children with arithmetic learning problems Kroesbergen and Van Luit focus on the acquisition and use of multiplication strategies Milo and Ruijsenaars do the same for addition and subtraction up to 100 After reading this book not all challenges of learning disabilities to teaching and instruction will be tackled But it surely can offer some contribution in getting away from some of them The authors hope it gives a lot of inspiration to the diverse audience we had in mind practitioners as well as researchers of different disciplines

Creative Strategy Chris Bilton, Stephen Cummings, 2010-04-26. People tend to think of creativity and strategy as opposites. This book argues that they are far more similar than we might expect. More than this, actively aligning creative and strategic thinking in any enterprise can enable more effective innovation, entrepreneurship, leadership and organizing for the future. By considering strategy as a creative process and vice versa, the authors define creative strategy as a mindset which switches between opposing processes and characteristics and which drives every aspect of the business. The authors draw experiences and cases from across this false divide from the music industry, sports, fashion, Shakespearean theatre, companies, creative and media organizations and dance as well as what we might regard as more mundane providers of mainstream products and services to uncover the creative connections behind successful strategy. Creative Strategy is a talisman for those looking to take a new path.

Matt Hardisty, Strategy Director, Mother Advertising. It has been said that business is a hybrid of dancing and calculation: the former incorporating the creative within a firm, the latter the strategic. Bilton and Cummings show how these apparently contradictory processes can be integrated. Their insights about how firms can create to strategize and strategize to create are informative for managers and management scholars alike.

Jay Barney, Professor and Chase Chair of Strategic Management, Fisher College of Business, The Ohio State University. In today's world, new thinking, creativity is required to tackle long-standing problems or address new opportunities. The trouble is few organizations understand how to foster and apply creativity at least in any consistent manner. This book provides new insights into just how that can be done. It moves creativity from being just the occasional and fortuitous flash of inspiration to being an embedded feature of the way the organization is run.
