The management of technological innovation is both an art as well as a science; the process involves the know-how and technological core skills to deliver the functionality on the one hand and with an ear on the ground, the ability to identify changes in technologies to come up with new innovations on the other. This requires, as a result, frameworks, system tools, and methodologies to improve the yield in innovations. Managing Technological Innovation provides a set of tools and case studies for R&D, presenting the methods available to better matching of technologies to strategic directions, supported with case studies to illustrate the evaluation methods. Part 3 covers the development and building of technological portfolios with new products as well as mitigation strategies. Part 4 focuses on the execution phase of built portfolios, the development of new products. And finally, Part 5 rounds up with a study on the factors which impact the diffusion of technological innovations into the marketplace. This book is a practical guide for R&D professions and designers as well as a case study reference for graduate students in pursuit of their project work.

Modeling Tools for Environmental Engineers and Scientists Nirmala Khandan, 2001-12-20.
