

Squaring and Rooting: Inverses

Warm-Up

Solve each equation for x . Remember: These equations usually have two solutions.

A) $x^2 + 21 = 70$

B) $4x^2 - 12 = 13$

C) $(x - 3)^2 + 4 = 40$

1. Review of Quadratic Functions

A. For the equation $y = x^2$, complete the table. Then plot points to construct the graph.

B. If the domain of the equation is $\{-3, -2, -1, 0, 1, 2, 3\}$, then what would be the range?

C. Is this equation a function? Explain.

$$y = x^2$$

2. Inverse with Coordinates

A. Recall that an inverse can be formed by switching the x - and y -coordinates in a relation. Use this method to make a table and graph for the inverse of $y = x^2$.

B. Is this inverse a function? Explain.

3. Inverse with Algebra

Remember that another way to find an inverse is to switch the x and y variables in an equation, then solve for the "new" y .

A. Use this algebraic method to find the inverse of $y = x^2$.

Equation: $y = x^2$

Inverse: $\underline{\hspace{1cm}} = \underline{\hspace{1cm}}^2$

Solve:

Notation: $f^{-1}(x) =$

B. Use a calculator to help you sketch the graph of this inverse equation in the box below.

Does this graph match your answer from #2? Explain.

An Introductory Guide to Computational Methods for the Solution of Physics Problems George Rawitscher, Victo dos Santos Filho, Thiago Carvalho Peixoto, 2018-10-24 This monograph presents fundamental aspects of modern spectral and other computational methods which are not generally taught in traditional courses It emphasizes concepts as errors convergence stability order and efficiency applied to the solution of physical problems The spectral methods consist in expanding the function to be

calculated into a set of appropriate basis functions generally orthogonal polynomials and the respective expansion coefficients are obtained via collocation equations The main advantage of these methods is that they simultaneously take into account all available information rather than only the information available at a limited number of mesh points They require more complicated matrix equations than those obtained in finite difference methods However the elegance speed and accuracy of the spectral methods more than compensates for any such drawbacks During the course of the monograph the authors examine the usually rapid convergence of the spectral expansions and the improved accuracy that results when nonequispaced support points are used in contrast to the equispaced points used in finite difference methods In particular they demonstrate the enhanced accuracy obtained in the solution of integral equations The monograph includes an informative introduction to old and new computational methods with numerous practical examples while at the same time pointing out the errors that each of the available algorithms introduces into the specific solution It is a valuable resource for undergraduate students as an introduction to the field and for graduate students wishing to compare the available computational methods In addition the work develops the criteria required for students to select the most suitable method to solve the particular scientific problem that they are confronting
