Optoelectronic Properties of Graphene-Based van der Waals Hybrids Kallol Roy, 2020-10-21 This thesis deals with the development and in depth study of a new class of optoelectronic material platform comprising graphene and MoS₂ in which MoS₂ is used essentially to sensitize graphene and lead to unprecedentedly high gain and novel optoelectronic memory effects The results presented here open up the possibility of designing a new class of photosensitive devices which can be utilized in various optoelectronic applications including biomedical sensing astronomical sensing optical communications optical quantum information processing and in applications requiring low intensity photodetection and number resolved single photon detection Electric Railway Directory and Buyers' Manual, 1908 **Program Operations Manual System** United States. Schreiber, 2019-09-04 This thesis presents the discovery of a surprising phase transition between a topological and a broken symmetry phase Phase transitions between broken symmetry phases involve a change in symmetry and those between topological phases require a change in topological order in rare cases however transitions may occur between these two broad classes of phases in which the vanishing of the topological order is accompanied by the emergence of a broken symmetry This thesis describes observations of such a special phase transition in the two dimensional electron gas confined in the GaAs AlGaAs structures When tuned by hydrostatic pressure the $\nu = 5/2$ and $\nu = 7/2$ fractional quantum Hall states believed to be prototypical non Abelian topological phases of the Pfaffian universality class give way to an electronic nematic phase Remarkably the fractional quantum Hall states involved are due to pairing of emergent particles called composite fermions The findings reported here therefore provide an interesting example of competition of pairing and nematicity This thesis provides an introduction to quantum Hall physics of the two dimensional electron gas contains details of the high pressure experiments and offers a discussion of the ramifications and of the origins of the newly reported phase transition **List of Books for High School Libraries Including Handbook of School Library Practice** Ohio State Library, 1925 International Handbook of Phobic and Anxiety Disorders in Children and Adolescents Thomas H. Kleespies,2016-09-19 The Oxford Handbook of Behavioral Emergencies and Crises includes the most up to date and valuable research on the evaluation and management of the most challenging patients or clients faced by mental health providers individuals who are at high risk of suicide of other directed violence or of becoming the victims of interpersonal violence These are cases in which the outcome can be serious injury or death and there can be negative consequences not only for the patient but also for the patient s family and friends for the assessing or treating

clinician and for the patient's clinic or medical center. Virtually all mental health clinicians with an active caseload will see individuals with such issues. This Handbook is comprised of chapters by leading clinicians, researchers, and scholars in this area of practice. It presents a framework for learning the skills needed for assessing and working competently with such high-risk individuals. Chapters draw a distinction between behavioral emergencies and crises and between emergency intervention and crisis intervention. The book examines the interrelated aspects of the major behavioral emergencies that is, for example, the degree to which interpersonal victimization may lead an individual on a pathway to later suicidal or violent behavior or the degree to which suicidal individuals and violent individuals may share certain cognitive characteristics. This resource is not simply a knowledge base for behavioral emergencies; it also presents a method for reducing stress and acquiring skills in working with high-risk people.
