Performance of 8 Cold-Climate Envelopes for Passive Houses Rolf Jacobson, 2012-09-10 Master's Thesis from the year 2011 in the subject Art Architecture History of Construction grade none University of Minnesota Twin Cities College of Design language English abstract Exterior envelopes for Passive Houses in very cold climates have not been developed tested and used as extensively as those in more mild climates such as central Europe The purpose of this investigation was to push that development further by testing and comparing the performance of a variety of North American and Scandinavian envelope types that have been used in limited numbers for Passive Houses in those regions A group of eight envelopes were selected and tested with a number of software analyses Athena life cycle analysis WUFI hygrothermal modeling and THERM and EN ISO 6946 2 D U value calculations for thermal bridging Finally the Passive House Planning Package PHPP was used to confirm that the envelopes met Passive House energy performance requirements in a very cold climate using a basic passive solar house design Although significant variation was found in the performance of these eight envelope types almost all of them were found capable of meeting the energy efficiency and thermal bridging requirements of the Passive House certification in a very cold climate while maintaining moisture safety durability and significant life cycle energy and carbon savings These findings demonstrate that even in cold climates a variety of envelope types can be used successfully for certified Passive Houses Envelope types 1 Advanced 2x6 framing 24 on center with interior cross strapping and exterior insulation insulated with mineral wool 2 Advanced 2x6 framing 24 on center insulated with high density spray polyurethane foam and exterior rigid foam 3 Double 2x4 stud wall with studs 16 on center insulated with blown cellulose 4 I joist TJI balloon framing 24 on center insulated with blown fiberglass 5 Insulated concrete form wall ICF using integral rigid EPS foam insulation 6 Concrete block wall insulated with exterior mineral wool 7 Massivtre Structural engineered panel SEP insulated with exterior rigid foam and 8 Structural insulated panel SIP using integral EPS rigid foam insulation For comparison a base option was also studied Standard 2x6 framing 16 on center with fiberglass batt insulation See Appendix for diagrams of each envelope

Publishing Record ,1999 Energy and Seismic Renovation Strategies for Sustainable Cities Giuseppe

Margani,2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and or ineffectiveness of conventional retrofit solutions financial e g high renovation costs insufficient incentives subsidies organizational e g occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources **Net Zero Energy Buildings**

Linda Reeder,2016-03-31 This book presents 18 in depth case studies of net zero energy buildings low energy building that generate as much energy as they consume over the course of a year for a range of project types sizes and U S climate zones Each case study describes the owner s goals the design and construction process design strategies measurement and verification activities and results and project costs With a year or more of post occupancy performance data and other project information as well as lessons learned by project owners and developers architects engineers energy modelers constructors and operators each case study answers the questions What were the challenges to achieving net zero energy performance and how were these challenges overcome How would stakeholders address these issues on future projects Are the occupants satisfied with the building Do they find it comfortable Is it easy to operate How can other projects benefit from the lessons learned on each project What would the owners designers and constructors do differently knowing what they know now A final chapter aggregates processes to engage in and pitfalls to avoid when approaching the challenges peculiar to designing constructing and owning a net zero energy building By providing a wealth of comparable information this book which will flatten the learning curve for designing constructing and owning this emerging building type and improve the effectiveness
