Algebra in the Early Grades James J. Kaput,David W. Carraher,Maria L. Blanton,2017-09-25 This volume is the first to offer a comprehensive research based multi faceted look at issues in early algebra In recent years the National Council for Teachers of Mathematics has recommended that algebra become a strand flowing throughout the K 12 curriculum and the 2003 RAND Mathematics Study Panel has recommended that algebra be the initial topical choice for focused and coordinated research and development in K 12 mathematics This book provides a rationale for a stronger and more sustained approach to algebra in school as well as concrete examples of how algebraic reasoning may be developed in the early grades It is organized around three themes The Nature of Early Algebra Students Capacity for Algebraic Thinking Issues of Implementation Taking Early Algebra to the Classrooms The contributors to this landmark volume have been at the forefront of an effort to integrate algebra into the existing early grades mathematics curriculum They include scholars who have been developing the conceptual foundations for such changes as well as researchers and developers who have led empirical investigations in school settings Algebra in the Early Grades aims to bridge the worlds of research practice design and theory for educators researchers students policy makers and curriculum developers in mathematics education

The British Library General Catalogue of Printed Books 1976 to 1982 British Library,1983 *Teaching Children Mathematics* ,2004 *Concise Guide to Numerical Algorithmics* John Lawrence Nazareth,2023-01-02 Numerical Algorithmic Science and Engineering NAS E or more compactly Numerical Algorithmics is the theoretical and empirical study and the practical implementation and application of algorithms for solving finite dimensional problems of a numeric nature The variables of such problems are either discrete valued or

continuous over the reals or and as is often the case a combination of the two and they may or may not have an underlying network graph structure This re emerging discipline of numerical algorithmics within computer science is the counterpart of the now well established discipline of numerical analysis within mathematics where the latter s emphasis is on infinite dimensional continuous numerical problems and their finite dimensional continuous approximates A discussion of the underlying rationale for numerical algorithmics its foundational models of computation its organizational details and its role in conjunction with numerical analysis in support of the modern modus operandi of scientific computing or computational science engineering is the primary focus of this short monograph It comprises six chapters each with its own bibliography Chapters 2 3 and 6 present the book s primary content Chapters 1 4 and 5 are briefer and they provide contextual material for the three primary chapters and smooth the transition between them Mathematical formalism has been kept to a minimum and whenever possible visual and verbal forms of presentation are employed and the discussion enlivened through the use of motivating quotations and illustrative examples The reader is expected to have a working knowledge of the basics of computer science an exposure to basic linear algebra and calculus and perhaps some real analysis and an understanding of elementary mathematical concepts such as convexity of sets and functions networks and graphs and so on Although this book is not suitable for use as the principal textbook for a course on numerical algorithmics NAS E it will be of value as a supplementary reference for a variety of courses It can also serve as the primary text for a research seminar And it can be recommended for self study of the foundations and organization of NAS E to graduate and advanced undergraduate students with sufficient mathematical maturity and a background in computing When departments of computer science were first created within universities worldwide during the middle of the twentieth century numerical analysis was an important part of the curriculum Its role within the discipline of computer science has greatly diminished over time if not vanished altogether and specialists in that area are now to be found mainly within other fields in particular mathematics and the physical sciences A central concern of this monograph is the regrettable downward trajectory of numerical analysis within computer science and how it can be arrested and suitably reconstituted Resorting to a biblical metaphor numerical algorithmics NAS E as envisioned herein is neither old wine in new bottles nor new wine in old bottles but rather this re emerging discipline is a decantation of an age old vintage that can hopefully find its proper place within the larger arena of computer science and at what appears now to be an opportune time

Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds. Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism. Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction.
