

SuperDuct Conventional Two-Wire Duct Smoke Detector

Product description

The SuperDuct Conventional Two-Wire Duct Smoke Detector detects the presence of smoke in a building's HVAC system under extended temperature ranges. Its primary purpose is to provide early warning of an impending fire and to prevent smoke from circulating throughout the building.

The duct smoke detector provides a Form C alarm relay that changes over when the detector enters the alarm state. Operation of the alarm relay can't be guaranteed when installed on the same circuit as other automatic or manual initiating devices.

The duct smoke detector comprises a plastic housing, a printed circuit board, a clear plastic cover, and an exhaust tube. The clear plastic cover permits visual inspections without having to disassemble the detector. The cover attaches to the detector housing using four captive screws and forms an airtight chamber around the sensing electronics.

A sampling tube is required to introduce air into the detector. The sampling tube is ordered separately and varies in length depending on the width of the HVAC duct.

This document applies to the following duct smoke detector models: ESD-2W and SD-2W.

WARNING: SuperDuct duct smoke detectors are not intended as substitutes for open area protection.
