2190-9172 SUPERVISED IAM
(full size)

DESCRIPTION:

The 2190-9172 is an individually addressable module that has both its power and its communications supplied by a two wire MAPNET II[†] circuit. It provides location specific addressability to a single initiating device or multiple devices by monitoring normally open, dry contacts. Closure of the monitored contacts initiates an alarm. An open in the initiating circuitry wiring will cause a trouble to be reported at the Fire Alarm Control Panel.

If the initiating device contacts are momentary, such as from a rate-of-rise heat detector, enabling the latch feature allows the IAM to latch the alarm condition until the system is reset. For applications where the contact closure latches, or if its condition needs to be tracked at the control panel, non-latching operation may be enabled.

† MAPNET addressable communications is protected by U.S. Patent No. 4,796,025.
