Description

The Simplex addressable manual station combines the familiar Simplex manual station housing with a compact communication module that is easily installed to satisfy demanding applications. Its integral individual addressable module (IAM) constantly monitors status and communicates changes to the connected control panel through IDNet or MAPNET II communications wiring.

Operation

Activation of the 4099-9004 single action manual station requires a firm downward pull to activate the alarm switch. Completing the action breaks an internal plastic break-rod which is visible below the pull lever, use is optional. The use of a break-rod can be a deterrent to vandalism without interfering with the minimum pull requirements needed for easy activation. The pull lever latches into the alarm position and remains extended out of the housing to provide a visible indication.

Single Action NO GRIP Station 4099-9021. For applications such as California Building Code, Title 24, which requires "Controls and operating mechanisms shall be operable with one hand and shall not require tight grasping, pinching or twisting of the wrist," the model 4099-9021 station provides a more easily operated pull lever compared to standard stations. Retrofit of existing stations is available using the 4099-9805 Retrofit kit.

Double Action Stations (Breakglass) require the operator to strike the front mounted hammer to break the glass and expose the recessed pull lever. The pull lever then operates as a single action station.

Double Action Stations (Push Type) require that a spring loaded interference plate, marked PUSH, be pushed back to access the pull lever of the single action station.

Station reset requires the use of a key to reset the manual station lever and deactivate the alarm switch. If you use the break-rod, you must replace it.

Station testing is performed by physical activation of the pull lever. You can also perform electrical testing by unlocking the station housing to activate the alarm switch.

Multipurpose Prevention Technologies for HIV, STIs & Pregnancies Barbara Friedland, Andrea Ries Thurman, Karl Malcolm, Harriet Nuwagaba-Biribonwoha, 2024-02-01 Globally, women of reproductive age face two overlapping issues that have a significant impact on their health and well-being: unintended pregnancy and sexually transmitted infections (STIs), including HIV. A growing body of research indicates that the majority of women across geographies, ages, racial and ethnic backgrounds would prefer a multipurpose prevention technology (MPT) that combines protection against pregnancy and HIV/STIs versus individual products for contraception and disease prevention. Currently, male and female condoms are the only available MPTs. A wider range of MPT options will help women select methods that they are less apt to discontinue, as well as increase uptake by first-time users. A number of MPT candidates, including intravaginal rings (IVRs), oral tablets, vaginal fast-dissolving inserts (FDIs), implants, injectables, and microarray patches (MAPs), are in various stages of development. The goal of this Research Topic is to invigorate continued development on MPTs by providing the most up-to-date research on specific products in development, identifying research gaps related to the field overall, and preparing for introduction into programs and healthcare systems. Our broad approach will cover formulation science, clinical trials, sociobehavioral research, and implementation science to present the latest thinking in all areas of MPT development, from bench to bedside.

Pharmaceutical Applications of Supramolecules Nidhi Goel, Naresh Kumar, 2023-01-16 This book outlines the use of supramolecules as different pharmaceutical drugs. Supramolecular chemistry in pharmaceutical sciences is quite a young and rapidly developing field. Supramolecular assemblies might offer an alternative for existing pharmaceutical formulations as they facilitate the improvement of physicochemical and pharmacological properties, i.e., higher bioavailability, better biocompatibility, and drug targeting, fewer multidrug resistances. This book offers an overview of the recent advances in supramolecular structures and discusses the future aspects and challenges related to the development of these molecules, providing also a perspective on how to overcome these issues. Divided into 13 chapters contributed by experts in their field, the book provides a deeper understanding of intermolecular forces playing pivotal roles in mediating the interactions between chemical molecules and biological systems by focusing on different applications of supramolecular compounds. In

this book readers will find valuable insights into the preparation of supramolecules and the latest research and development trends of supramolecules as anticancer drugs including liquid crystalline supramolecular assemblies and as antimicrobial antiviral anti inflammatory and cardiovascular drugs Particular attention is given to the application of supramolecules in the fields of biomedicine bioimaging and vaccine development Given its breadth this book will appeal to a wide readership from researchers and students interested in these fields to professionals in the pharma industry **Lippincott Q&A**
