The Sensory Ecology of Birds Graham R.

Martin, 2017-03-30 Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way However it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets A sensory ecology approach suggests how these problems can be mitigated The Sensory Ecology of Birds ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds A bird may use a wide range and combination of sensory information that comes from sight hearing smell mechanoreception taste and magnetoreception It may also include specific refinements of senses such as echolocation and remote touch from the bill The book recognises that there are many complex and subtle trade offs and complementarities of information between different types of sensory information This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists

A Complete Guide to Keeping Pet Birds Hseham Amrahs, 2024-01-03 The creation of this guide would not have been possible without acknowledging the expertise of seasoned avian veterinarians ornithologists and passionate bird owners who graciously shared their knowledge Their invaluable contributions have enhanced the depth and accuracy of the information presented here Each chapter of *A Complete Guide to Keeping Pet Birds* is a carefully woven narrative unveiling a different facet of avian life From the evolutionary roots of bird behavior to the intricacies of communication nesting habits and the importance of environmental enrichment our exploration is as diverse as the avian kingdom itself Embedded within the chapters are real life case studies stories of bird owners who have faced challenges sought solutions and most importantly celebrated the joys of avian companionship These stories offer a glimpse into the varied experiences of bird

ownership illustrating the adaptability and resilience of both birds and their human caregivers

Visual Memory Timothy F. Brady, Wilma A. Bainbridge, 2022-03-29 Featuring contributions from world leading researchers this book explores the relationship between visual perception and memory It bridges the traditionally separate fields of vision science and recognition memory and deals with an interdisciplinary set of perspectives combining research in psychology neuroscience and artificial intelligence The book makes new connections between the wealth of research from each respective field developing the idea that visuospatial memory is our best memory system This volume traverses topics grounded in both empirical study and real world applications including working short term memory long term memory the neuroscience of memory development of memory over the lifespan autobiographical memories false memories and eyewitness testimony It argues that an increased knowledge of how visuospatial memory works can lead to an improved understanding of the basic features of memory as well as providing strategies for memory improvement The book features cutting edge visual memory research where converging methods in psychophysics cognitive neuroscience and computational modeling have been propelling the field forward Visual Memory is an essential read for all students and researchers of memory and visual perception It will also be useful for researchers and students in related fields including human computer interaction data visualization cognitive science and cognitive enhancement

Adaptive Mechanisms in the Ecology of Vision S. Archer, M.B. Djamgoz, E. Loew, J.C. Partridge, S. Vallerga, 2013-04-17 John Lythgoe was one of the pioneers of the Ecology of Vision a subject that he ably delineated in his classic and inspirational book published some 20 years ago 1 At heart the original book aimed generally to identify inter relationships between vision animal behaviour and the environment John Lythgoe excelled at identifying the interesting questions in the ecology of an animal that fitted the answers presented by an analysis of the visual system Over the last

twenty years however since Lythgoe's landmark publication much progress has been made and the field has broadened considerably. In particular our understanding of the adaptive mechanisms underlying the ecology of vision has reached considerable depths extending to the molecular dimension partly as a result of development and application of new techniques. This complements the advances made in parallel in clinically oriented vision research. 2 The current book endeavours to review the progress made in the ecology of vision field by bringing together many of the major researchers presently active in the expanded subject area. The contents deal with theoretical and physical considerations of light and photoreception, present examples of visual system structure and function and delve into aspects of visual behaviour and communication. Throughout the book we have tried to emphasise one of the major themes to emerge within the ecology of vision: the high degree of adaptability that visual mechanisms are capable of undergoing in response to diverse and dynamic environments and behaviours.

Aves, the birds, is the wildlife group that people most frequently encounter. With over 10,000 species worldwide, these animals are part of our everyday experience. They are also the focus of intense research, and their management and conservation is a subject of considerable effort throughout the world. Martin,2020-09-21 Graham Martin takes the reader deep into the world of birds from a new perspective with a through birds eyes approach to ornithology that goes beyond the traditional habitat or ecological point of view There is a lot more to a bird s world than what it receives through its eyes This book shows how all of the senses complement one another to provide each species with a unique suite of information that guides their daily activities The senses of each bird have been fine tuned by natural selection to meet the challenges of its environment and optimise its behaviour from spotting a carcass on a hillside to pecking at minute insects from catching fish in murky waters to navigating around the globe The reader is also introduced to the challenges posed to birds by the obstacles with which humans have cluttered their worlds from power lines to windowpanes All of these challenges need explaining from the birds sensory perspectives so that effective mitigations can be put in place The book leads the reader through a wealth of diverse information presented in accessible text with over 100 colour illustrations and photographs The result is a highly readable and authoritative account which will appeal to birdwatchers and other naturalists as well as researchers in avian biology The author has researched the senses of birds throughout a 50 year career in ornithology and sensory science He has always attempted to understand birds from the perspective of how sensory information helps them to carry out different tasks in different environments He has published papers on more than 60 bird species from Albatrosses and Penguins to Spoonbills and Kiwi His first fascination was with owls and night time and owls have remained special to him throughout his career He has collaborated and travelled widely and pondered diverse sensory challenges that birds face in the conduct of different tasks in different habitats from mudflats and murky waters to forests deserts and caves In recent years he has focused on how understanding bird senses can help to reduce the very high levels of bird deaths that are caused by human artefacts particularly wind turbines power lines and gill nets
