How and Why Species Multiply Peter R. Grant, B. Rosemary Grant, 2020-03-31 Charles Darwin's experiences in the Galapagos Islands in 1835 helped to guide his thoughts toward a revolutionary theory that species were not fixed but diversified from their ancestors over many generations and that the driving mechanism of evolutionary change was natural selection In this concise accessible book Peter and Rosemary Grant explain what we have learned about the origin and evolution of new species through the study of the finches made famous by that great scientist Darwin's finches Drawing upon their unique observations of finch evolution over a thirty four year period the Grants trace the evolutionary history of fourteen different species from a shared ancestor three million years ago They show how repeated cycles of speciation involved adaptive change through natural selection on beak size and shape and divergence in songs They explain other factors that drive finch evolution including geographical isolation which has kept the Galapagos relatively free of competitors and predators climate change and an increase in the number of islands over the last three million years which enhanced opportunities for speciation and flexibility in the early learning of feeding skills which helped species to exploit new food resources Throughout the Grants show how the laboratory tools of developmental biology and molecular genetics can be combined with observations and experiments on birds in the field to gain deeper insights into why the world is so biologically rich and diverse Written by two preeminent evolutionary biologists **How and Why Species Multiply** helps to answer fundamental questions about evolution in the Galapagos and throughout the world

Rosemary Grant, 2024-11-12 A new edition of Peter and Rosemary Grant's classic account of their groundbreaking forty year study of Darwin's finches **40 Years of Evolution** is a landmark study of the finches first made famous by Charles Darwin one that documents as never before the evolution of species through natural selection In this now legendary study renowned evolutionary biologists Peter and Rosemary Grant draw on a vast and unparalleled range of ecological behavioral and genetic data to continuously measure changes in finch populations over a period of four decades on the small island of Daphne Major in the Galapagos archipelago In the years since the book's publication the field of genomics has developed greatly In this newly revised edition of **40 Years of Evolution** the Grants combine the results of their historic field study with genomic analyses of their primary findings resolve unanswered questions from the field and provide invaluable insights into the genetic basis of beak and body size variation and the history of this iconic adaptive radiation
