

Unit 1 Review**REVIEW****LESSON 1-1****Operations on Real Numbers****Quick Review**

Sum, difference, and quotient of rational numbers are rational. Quotient of irrational numbers (both are defined) are rational.

The sum and difference of a rational number and an irrational number are irrational. The product and quotient (both defined) of a rational number and an irrational number are irrational, except when the rational number is 0.

Example

Let a , b , c , and d be integers, with $b \neq 0$ and $d \neq 0$. Is the sum of $\frac{a}{b}$ and $\frac{c}{d}$ rational or irrational? Is their product rational or irrational?

$$\frac{a}{b} + \frac{c}{d} = \frac{ad + bc}{bd} \qquad \frac{a}{b} \cdot \frac{c}{d} = \frac{ac}{bd}$$

The sum and product are both rational.

Practice & Problem Solving

8. Give an example of two irrational numbers whose product is not small.

For each number, determine whether it is an element of the real numbers, irrational numbers, rational numbers, integers, or whole numbers. List all that apply.

9a. $\sqrt{2.5}$ 19. $\sqrt{25}$ 11. -48

Order from least to greatest.

19. 0.50 , $\sqrt{19}$, $\frac{\sqrt{19}}{2}$ 24. $\frac{18}{10}$, 2.4 , $\sqrt{5.05}$

15. **Make Sense and Persuade** Taylor wants tape to make a square play area in the basement for their doghouse. The area measures 16 ft in the side length of the square. Will it be at least 4 ft? Explain.

LESSON 1-2**Solving Linear Equations****Quick Review**

You can use properties of equality to solve linear equations. Use the Distributive Property and combine like terms, when needed.

Example

Solve $\frac{3}{4}(4x - 12) + 5x = 24$.

$$\frac{3}{4}(4x - 12) + 5x = 24$$

$$4x - 10 + 5x = 24$$

Distributive Property

$$9x - 10 = 24$$

Combine like terms.

$$9x - 10 + 10 = 24 + 10$$

Add 10 to each side.

$$9x = 34$$

Simplify

$$9x = 34$$

Divide each side by 9.

$$x = \frac{34}{9}$$

Simplify

Practice & Problem Solving

16. **Use Structure** What property would you use first to solve $\frac{1}{2}x - 6 = 10$? Explain.

Solve each equation.

17. $2(2x - 1) = 24$

18. $500 = 8(4x - 5)$

19. $\frac{3}{4} = \frac{2}{3}x - \frac{1}{2}$

20. $1.045x + 0.048 = 15.249$

21. **Model with Mathematics** The price for an adult movie ticket is $1\frac{1}{4}$ more than a movie ticket for a child. They take their daughter to the movie. They a box of popcorn for \$5.50, and spend \$26.50. Write and solve an equation to find the price for each of their movie tickets.

Integers, Polynomials, and Rings Ronald S. Irving, 2004-01-08 This book began life as a set of notes that I developed for a course at the University of Washington entitled Introduction to Modern Algebra for Teachers Originally conceived as a text for future secondary school mathematics teachers it has developed into a book that could serve well as a text in an undergraduate course in abstract algebra or a course designed as an introduction to higher mathematics This book differs from many undergraduate algebra texts in fundamental ways the reasons lie in the book's origin and the goals I set for the course The course is a two quarter sequence required of students intending to fulfill the requirements of the teacher preparation option for our B.A. degree in mathematics or of the teacher preparation minor It is required as well of those intending to matriculate in our university's Master's in Teaching program for secondary mathematics teachers This is the principal course they take involving abstraction and proof and they come to it with perhaps as little background as a year of calculus and a quarter of linear algebra The mathematical ability of the students varies widely as does their level of mathematical interest

A History of Chinese Mathematics Jean-Claude Martzloff, 2007-08-17 Since the end of the 19th century a number of specialised journals albeit with a large audience have regularly included articles on the history of Chinese mathematics while a number of books on the history of mathematics include a chapter on the subject Thus the progressive increase in our knowledge of the content of Chinese mathematics has been accompanied by the realisation that as far as results are concerned there are numerous similarities between Chinese mathematics and other ancient and medieval mathematics For example Pythagoras theorem the double false position rules Hero's formulae and Ruffini-Horner's method are found almost everywhere As far as the reasoning used to obtain these results is concerned the fact that it is difficult to find rational justifications in the original texts has led to the reconstitution of proofs using appropriate tools of present day elementary algebra Consequently the conclusion that Chinese mathematics is of a fundamentally algebraic nature has been ventured However in recent decades new studies particularly in China and Japan have adopted a different approach to the original texts in that they have considered the Chinese modes of reasoning as these can be deduced from the rare texts which contain justifications By studying the results and the methods explicitly mentioned in these texts hand in hand this Chinese and Japanese research has attempted to reconstruct the conceptions of ancient authors within a given culture and period without necessarily involving the convenient but often distorting social and conceptual framework of present day mathematics

Algebra of Conscience V.A. Lefebvre, 2013-04-17 Conscience is an essential human attribute Nevertheless in the construction of formal models of the subject it is customarily left outside the framework of theoretical analysis The Algebra of Conscience whose first edition appeared in 1982 was the first specialized work modeling the phenomenon of conscience The method used in this book made it possible to connect moral experience with decision making procedures on the level of mathematical models The application of such models allows us to propose the hypothesis of two fundamentally different ethical systems determining the normative

patterns of human behavior in situations of conflict Under the first ethical system the subject's self esteem is raised if the subject seeks to resolve the conflict in the second it is raised by seeking to dramatize the conflict The new edition of *The Algebra of Conscience* is significantly expanded The second part of the book devoted to moral choice is completely new Based on the theory presented in the first part it constructs the model of a subject capable of making an intentional choice A special variable corresponds to the subject's intention This development allows us to include within the model freedom of will and freedom of choice and also to generalize classical 2 2 game theory to the case where outcomes in addition to having utility measures are either positive or negative In its concluding chapters the book constructs a dynamic model of the intentional subject faced with a choice between two alternatives neither of which is morally acceptable for the subject It is shown that in this case the probabilities of choice of the alternatives may change chaotically From this it follows that one cannot predict which alternative will be chosen or even the probabilities with which they will be chosen Audience The book is addressed to a broad readership having elementary knowledge of mathematical logic and the theory of probability It can be used in college courses studying the modelling of moral choice The book's material can also be used in the design of artificial intelligence systems

Numerical Linear Algebra for Applications in Statistics James E. Gentle, 2012-12-06 Numerical linear algebra is one of the most important subjects in the field of statistical computing Statistical methods in many areas of application require computations with vectors and matrices This book describes accurate and efficient computer algorithms for factoring matrices solving linear systems of equations and extracting eigenvalues and eigenvectors Although the book is

not tied to any particular software system it describes and gives examples of the use of modern computer software for numerical linear algebra. An understanding of numerical linear algebra requires basic knowledge both of linear algebra and of how numerical data are stored and manipulated in the computer. The book begins with a discussion of the basics of numerical computations and then describes the relevant properties of matrix inverses, matrix factorizations, matrix and vector norms, and other topics in linear algebra; hence the book is essentially self-contained. The topics addressed in this book constitute the most important material for an introductory course in statistical computing and should be covered in every such course. The book includes exercises and can be used as a text for a first course in statistical computing or as supplementary text for various courses that emphasize computations. James Gentle is University Professor of Computational Statistics at George Mason University. During a thirteen year hiatus from academic work before joining George Mason, he was director of research and design at the world's largest independent producer of Fortran and C general purpose scientific software libraries. These libraries implement many algorithms for numerical linear algebra. He is a Fellow of the American Statistical Association and member of the International Statistical Institute. He has held several national

Waves and Oscillations in Nature A Satya Narayanan, Swapan K Saha, 2015-05-21 Suitable for researchers and graduate students in fluid dynamics, astrophysics, and other areas of physics, this book clearly elucidates the dynamics and behavior of waves and oscillations in various mediums. It presents different types of waves and oscillations that can be observed and studied from macroscopic to microscopic scales. The authors describe applications in astrophysics, include simple exercises to give readers a hands-on grasp of the basics, and provide a large list of bibliographic sources that enable readers to research more technical aspects.

Matrix Algebra James E. Gentle, 2007-08-06 Matrix algebra is one of the most important areas of mathematics for data analysis and for statistical theory. The first part of this book presents the relevant aspects of the theory of matrix algebra for applications in statistics. This part begins with the fundamental concepts of vectors and vector spaces, next covers the basic algebraic properties of matrices, then describes the analytic properties of vectors and matrices in the multivariate calculus, and finally discusses operations on matrices in solutions of linear systems and in eigenanalysis. This part is essentially self-contained. The second part of the book begins with a consideration of various types of matrices encountered in statistics, such as projection matrices and positive definite matrices, and describes the special properties of those matrices. The second part also describes some of the many applications of matrix theory in statistics, including linear models, multivariate analysis, and stochastic processes. The brief coverage in this part illustrates the matrix theory developed in the first part of the book. The first two parts of the book can be used as the text for a course in matrix algebra for statistics students or as a supplementary text for various courses in linear models or multivariate statistics. The third part of this book covers numerical linear algebra. It begins with a discussion of the basics of numerical computations and then describes accurate and efficient algorithms for factoring matrices, solving linear systems of equations, and extracting eigenvalues and

eigenvectors Although the book is not tied to any particular software system it describes and gives examples of the use of modern computer software for numerical linear algebra This part is essentially self contained although it assumes some ability to program in Fortran or C and or the ability to use R S Plus or Matlab This part of the book can be used as the text for a course in statistical computing or as a supplementary text for various courses that emphasize computations The book includes a large number of exercises with some solutions provided in an appendix
