Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence at this point in history we are in a unique position to gain first hand insight into the field and its development. To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences, and how these discoveries advanced the thoughts of the key players involved. With over 90 world class contributors such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar L. St. and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer, past ESO Director General, this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection. **ISO Science Legacy** Catherine J. Cesarsky, Catherine Cesarsky, Alberto Salama, 2006-01-17 This book recounts results obtained via the Infrared Space Observatory ISO on comets in the close environment of pre-main sequence stars in the interstellar medium and in the final stages of stellar life using molecular hydrogen, ubiquitous crystalline silicates, water, and ices. ISO has enabled investigation of the fuelling mechanism of galaxies and new understanding of luminous infrared galaxies and their role in shaping present galaxies and in producing the cosmic infrared background.
