QUESTIONS

Circulatory System

The circulatory system is responsible for transporting nutrients, oxygen, and waste products to and from all parts of the body. Its main function is to ensure that every cell receives the oxygen and nutrients needed for life while removing waste products that could cause harm. Another important function of the circulatory system is to transport hormones, which act as chemical messengers throughout the body, such as insulin, which regulates blood sugar levels.

Reading Comprehension Questions

Instructions: Use the Circulatory System reading passage to complete the questions below. Write your answers in complete sentences.

1. What is the circulatory system responsible for?
2. What are hormones and what do they do?
3. What organ is at the center of the circulatory system?

What are capillaries and what do they do?

What does blood carry? What essential components?

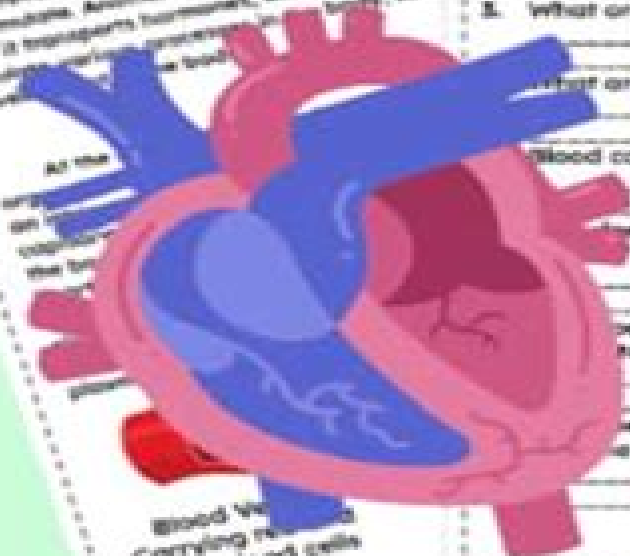

How does the nervous system interact with the circulatory system?

How does the circulatory system work together with the respiratory system?

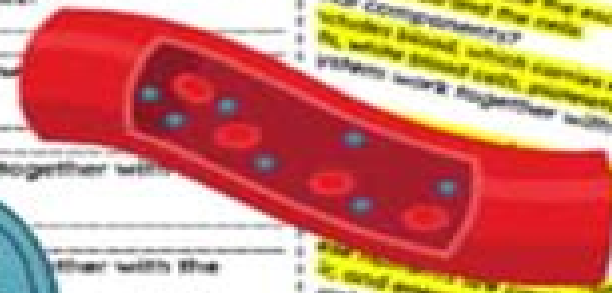

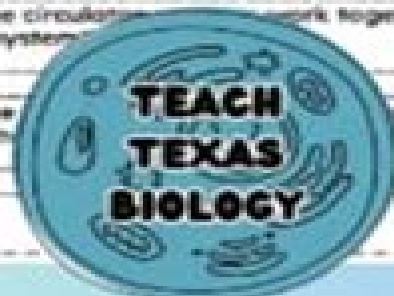

How does the circulatory system interact with the digestive system?

How does the circulatory system interact with the immune system?

How does the circulatory system interact with the endocrine system?

Blood Vessels
Carrying red and
white blood cells

For blood to be carried to cells and energy production, it must work together with the immune system. The immune system is the body's defense against disease and infection. It consists of various cells, proteins, and organs that work together to protect the body from harm.
