

## Getting information from our genes

1. Explain the difference between the DNA, a gene and a chromosome.

Here's a [link](#) I found that might be useful.

2. What does the central dogma of life describe?

Before the information in DNA is passed to protein, it is first passed to an intermediate molecule called RNA. RNA sequences are commonly represented in "string" form and are read in a 5' to 3' orientation. Let's see how information from RNA is read. A typical RNA sequence might be: 5'-AUGGAUGGAUAUGUAGUUGUGGUCUUUAGUUGA-3'

3. Take a look at Table 1 below. Compare and contrast between the string of alphabets and the RNA sequence.

| Table 1                        | String of Alphabets<br>"THESUNWASHOTBUTTHEOLD<br>MANDIDNOTGETHISHAT" | Sequence of bases<br>"AUGGAUGGAUAUGUAGUUG<br>UGGUCUUUAGUUGA" |
|--------------------------------|----------------------------------------------------------------------|--------------------------------------------------------------|
| Structure:                     | Linear                                                               |                                                              |
| Components of the information: | Alphabets (A, B, C, D, E, F etc)                                     |                                                              |
| Result:                        | Alphabets form words/sentence                                        |                                                              |

4. Without altering the string of alphabets from Table 1, what sentence can be formed:  
Thesunwashotbuttheoldmandidnotgethishat.

5. Referring to your answer in (4), suggest how RNA is being read in the cell?
