The Dappled World Nancy Cartwright:

The Dappled World Nancy Cartwright, 1999-09-23 It is often supposed that the spectacular successes of our modern mathematical sciences support a lofty vision of a world completely ordered by one single elegant theory In this book Nancy Cartwright argues to the contrary When we draw our image of the world from the way modern science works as empiricism teaches us we should we end up with a world where some features are precisely ordered others are given to rough regularity and still others behave in their own diverse ways This patchwork makes sense when we realise that laws are very special productions of nature requiring very special arrangements for their generation Combining classic and newly written essays on physics and economics **The Dappled World** carries important philosophical consequences and offers serious lessons for both the natural and the social sciences

Nancy Cartwright's Philosophy of Science Luc Bovens, Carl Hoefer, Stephan Hartmann, 2008-06-03 The only book that addresses Cartwright's undoubted influence on the study of the philosophy of science This critical assessment contains contributions from Cartwright's champions and critics including leading scholars in the field such as Ronald N Giere and Paul Teller

Science and Religion: A Very Short Introduction Thomas Dixon, 2008-07-24 The debate between science and religion is never out of the news emotions run high fuelled by polemical bestsellers like *The God Delusion* and at the other end of the spectrum high profile campaigns to teach Intelligent Design in schools Yet there is much more to the debate than the clash of these extremes As Thomas Dixon shows in this balanced and thought provoking introduction many have seen harmony rather than conflict between faith and science He explores not only the key philosophical questions that underlie the debate but also the social political and ethical contexts that have made science and religion such a fraught and interesting topic in the modern world offering perspectives from non Christian religions and examples from across the physical biological and social sciences Along the way he examines landmark historical episodes such as the trial of Galileo by the Inquisition in 1633 and the famous debate between Darwin's bulldog Thomas Huxley and Bishop Wilberforce in Oxford in 1860 The Scopes Monkey Trial in Tennessee in 1925 and the Dover Area School Board case of 2005 are explained with reference to the interaction between religion law and education in modern America

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Geo-Logic Robert Frodeman, 2012-02-01 Using a unified vision of geology consisting of equal parts geo poetry geo politics geo theology and geo science *Geo Logic* redraws the boundaries between philosophy and the earth sciences Although each discipline makes crucial contributions to contemporary environmental concerns neither will fulfill its potential until it transforms itself by engaging the other This book offers examples of how to relate environmental philosophy to science public policy and real world problems and shows what is epistemologically distinctive about scientific work and how to respond to

the cultural dynamics that are pulling these issues into the public sphere Frodeman advocates humanizing the earth sciences and bringing philosophy into the field

Creative Explorations David Gauntlett, 2007-05-07 How do you picture identity What happens when you ask individuals to make visual representations of their own identities influences and relationships Drawing upon an array of disciplines from neuroscience to philosophy and art to social theory David Gauntlett explores the ways in which researchers can embrace people's everyday creativity in order to understand social experience Seeking an alternative to traditional interviews and focus groups he outlines studies in which people have been asked to make visual things such as video collage and drawing and then interpret them This leads to an innovative project in which Gauntlett asked people to build metaphorical models of their identities in Lego This creative reflective method provides insights into how individuals present themselves understand their own life story and connect with the social world *Creative Explorations* is a lively and original discussion of identities media influences and creativity which will be of interest to both students and academics

What the Heavens Declare Lydia Jaeger, 2012-06-12 In her latest book *What the Heavens Declare* Lydia Jaeger provides a detailed analysis of the role of the theistic doctrine of creation in the rise of modern science with a particular focus on the natural order As the author explains despite the common use of the expression laws of nature by both scientists and laymen there is a long standing tradition of philosophical debate about and even refusal of the notion that laws of nature might exist independently of a divine or human mind This work attempts to account for natural order in harmony with the religious worldview that significantly contributed to the original context in which modern science began the world seen as the creation of the triune God

The Christian Idea of God Keith Ward, 2017-09-28 In this book eminent theologian Keith Ward takes a fresh look at the ancient philosophy of Idealism connects it with findings in modern science and shows that a combination of good science good philosophy and a passion for truth and goodness can underpin religious faith Going back to first principles he argues for the Idealist view that all knowledge begins with experience Critically examining the idealism of Plato Kant and Hegel Ward shows how this philosophy is strengthened by a knowledge of modern physics and how it can lead to a new and vivid presentation of Christian faith A work of philosophical rigour that makes clear the rational nature of belief in God this book challenges the easy assumptions of materialism and the relativity of truth that undermine both science and religion Ward writes in an accessible and readable style that gives new life and practical usefulness to idealist philosophy

Divine Action and the Human Mind Sarah Lane Ritchie, 2019-07-25 Challenges theological models of divine action that locate God's activity in human mind Emphasizes God's relationship with all of nature

Otto Neurath and the Unity of Science John Symons, Olga Pombo, Juan Manuel Torres, 2010-11-25 This volume critically reexamines Otto Neurath's conception of the unity of science Some of the leading scholars of Neurath's work along with many prominent philosophers of science critically examine his place in the history of philosophy of science and evaluate the relevance of his work for contemporary debates concerning the unity of science

Conjunctive Explanations in Science and Religion

Diarmid A. Finnegan, David H. Glass, Mikael Leidenhag, David N. Livingstone, 2023-02-28 This book investigates the nature and relevance of conjunctive explanations in the context of science and religion It explores questions concerning how scientific and religious explanations for features of the world or phenomena within it relate to each other and whether they might work together in mutually enriching ways The chapters address topics including the relationship between Darwinian and teleological explanations non reductive explanations of mind and consciousness and explanations of Christian faith and religious experience while others explore theological and philosophical issues concerning the nature and feasibility of conjunctive explanations Overall the contributions help to provide conceptual clarity on how scientific and religious explanations might or might not work together conjunctively as well as exploring how these ideas relate to specific topics in science and religion more generally

The Quest for Knowledge in International Relations Richard Ned Lebow, 2022-04-14 What do we mean by theory in international relations What kinds of knowledge do theories seek How do they stipulate it is found How should we evaluate any resulting knowledge claims What do answers to these questions tell us about the theory project in IR and in the social sciences more generally Lebow explores these questions in a critical evaluation of the positivist and interpretivist epistemologies He identifies tensions and problems specific to each epistemology and some shared by both and suggests possible responses By exploring the relationship between the foundations of theories and the empirical assumptions they encode Lebow's analysis enables readers to examine in greater depth the different approaches to theory and their related research strategies This book will be of interest to students and scholars of international relations theory and philosophy of social science

The Blind Spot Adam Frank, Marcelo Gleiser, Evan Thompson, 2024-03-05 A compelling argument for including the human perspective within science and for how human experience makes science possible This is by far the best book I've read this year Michael Pollan Professor of the Practice of Non fiction Harvard University 1 New York Times bestselling author A stimulating manifesto for changing the way we look at things Wall Street Journal It's tempting to think that science gives us a God's eye view of reality But we neglect the place of human experience at our peril In *The Blind Spot* astrophysicist Adam Frank theoretical physicist Marcelo Gleiser and philosopher Evan Thompson call for a revolutionary scientific worldview where science includes rather than ignores or tries not to see humanity's lived experience as an inescapable part of our search for objective truth The authors present science not as discovering an absolute reality but rather as a highly refined constantly evolving form of human experience They urge practitioners to reframe how science works for the sake of our future in the face of the planetary climate crisis and increasing science denialism Since the dawn of the Enlightenment humanity has looked to science to tell us who we are where we come from and where we're going but we've gotten stuck thinking we can know the universe from outside our position in it When we try to understand reality only through external physical things imagined from this outside position we lose sight of the necessity of experience This is the Blind Spot which the authors show lies behind our scientific conundrums

about time and the origin of the universe quantum physics life AI and the mind consciousness and Earth as a planetary system The authors propose an alternative vision scientific knowledge is a self correcting narrative made from the world and our experience of it evolving together To finally see the Blind Spot is to awaken from a delusion of absolute knowledge and to see how reality and experience intertwine The Blind Spot goes where no science book goes urging us to create a new scientific culture that views ourselves both as an expression of nature and as a source of nature s self understanding so that humanity can flourish in the new millennium

Messianic Imagination Joseph Wiebe,Paul G. Doerksen,Maxwell Kennel,Grant Poettcker,2025-10-30 Messianic Imagination Politics Theology and Literature explores the intersections of political theology apocalyptic vision and literary engagement Inspired by the work of P Travis Kroeker this festschrift invites readers into the vibrant and expansive horizon of Kroeker s messianic imagination Organized into three sections Engaging Messianic Politics Extending Apocalyptic Theology and Exploring Literary Revelations the book offers a rich tapestry of thought From political reflections on messianic hope to profound theological explorations and revelatory readings of literature this volume demonstrates how theology and imagination are inseparably linked More than a tribute Messianic Imagination challenges readers to wrestle with urgent questions of justice meaning and transcendence With contributions that spark curiosity and inspire tenacious thought this book serves as both a response to Kroeker s legacy and an invitation to explore the transformative power of the messianic vision

God and the Scientist Fraser Watts,2016-04-22 This book presents a celebration survey and critique of the theological work of arguably the most important and most widely read contributor to the modern dialogue between science and theology John Polkinghorne Including a major survey by Polkinghorne himself of his life s work in theology this book draws together contributors from among the most important voices in the science theology dialogue today to focus on key aspects of Polkinghorne s work with Polkinghorne providing responses Anybody exploring contemporary aspects of the science religion debate will find this book invaluable

Neo-Aristotelian Metaphysics and the Theology of Nature William M.R. Simpson,Robert C. Koons,James Orr,2021-10-10 This book explores the relationship between a scientifically updated Aristotelian philosophy of nature and a scientifically engaged theology of nature It features original contributions by some of the best scholars engaging with Aristotelianism in contemporary metaphysics philosophy of science and philosophical theology Despite the growing interest in Aristotelian approaches to contemporary philosophy of science few metaphysicians have engaged directly with the question of how a neo Aristotelian metaphysics of nature might change the landscape for theological discussion concerning theology and naturalism the place of human beings within nature or the problem of divine causality The chapters in this volume are collected into three thematic sections Naturalism and Nature Mind and Nature and God and Nature By pushing the current boundaries of neo Aristotelian metaphysics to recover the traditional notion of substantial forms in physics reframe the principle of proportionality in biology and restore the hierarchy of being familiar to ancient philosophy this book

advances a metaphysically unified framework that accommodates both scientific and theological knowledge enriching the interaction between science philosophy and theology Neo Aristotelian Metaphysics and the Theology of Nature will be of interest to scholars and advanced students working in metaphysics philosophy of science natural theology philosophical theology and analytic theology Chapters 1 2 and 7 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Prediction or Prophecy? Gregor Betz, 2007-10-06 Knowing in order to predict It was this leitmotiv alone that Auguste Comte in the 19th century considered suitable for the then rapidly developing empirical sciences This view remains unchanged until today not only in the empirical sciences themselves but also in the philosophy of science A scientific theory is and should be evaluated primarily on the grounds of its capacity to correctly predict observable phenomena The aim of predicting takes precedence over the other important aim of science namely to produce and purposefully manipulate phenomena by technical means in the laboratory moreover it even includes the latter For if scientists successfully produce and manipulate certain phenomena in an experiment they can ipso facto predict how that experiment will evolve under certain conditions We live in a scientifically dominated world The more science progresses the more important correct scientific predictions become To a sometimes even fatal extent we have made ourselves dependent on science and its results Our scientific technological interventions into nature yet also into social processes cover ever larger spatial and temporal distances and the consequences are ever more drastic given the increasing effort that would be required to reverse the effects if that is possible at all That is the reason why we ought to be very well informed about the consequences of our actions in particular those based on science and technology

Spaces of Enlightenment Science, 2021-12-28 Where did we do science in the Enlightenment and why This volume brings together leading historians of Early Modern science to explore the places spaces and exchanges of Enlightenment knowledge production Adding to our understanding of the geographies of knowledge it examines the relationship between space and place institutions objects and ideas showing the ways in which the location of science really matters Contributors are Robert Iliffe Victor Boantzis Margaret Carlyle Jasmine Kilburn Toppin Trevor H. Levere Alice Marples Gordon McQuat Larry Stewart Marie Th. baud Sorger and Simon Werrett

Canadian Law and Indigenous Self-Determination Gordon Christie, 2019-09-13 Canadian Law and Indigenous Self-Determination demonstrates how over the last few decades Canadian law has attempted to remove Indigenous sovereignty from the Canadian legal social and political landscape

Science as Social Existence Jeff Kochan, 2017-12-18 In this bold and original study Jeff Kochan constructively combines the sociology of scientific knowledge SSK with Martin Heidegger's early existential conception of science Kochan shows convincingly that these apparently quite different approaches to science are in fact largely compatible even mutually reinforcing By combining Heidegger with SSK Kochan argues we can explicate elaborate and empirically ground Heidegger's philosophy of science in a way that makes it more accessible and useful for

social scientists and historians of science Likewise incorporating Heideggerian phenomenology into SSK renders SSK a more robust and attractive methodology for use by scholars in the interdisciplinary field of Science and Technology Studies STS Kochan s ground breaking reinterpretation of Heidegger also enables STS scholars to sustain a principled analytical focus on scientific subjectivity without running afoul of the orthodox subject object distinction they often reject Science as Social Existence is the first book of its kind unfurling its argument through a range of topics relevant to contemporary STS research These include the epistemology and metaphysics of scientific practice as well as the methods of explanation appropriate to social scientific and historical studies of science Science as Social Existence puts concentrated emphasis on the compatibility of Heidegger s existential conception of science with the historical sociology of scientific knowledge pursuing this combination at both macro and micro historical levels Beautifully written and accessible Science as Social Existence puts new and powerful tools into the hands of sociologists and historians of science cultural theorists of science Heidegger scholars and pluralist philosophers of science The Science of Being as Being George Couvalis, 2024-12-17 This book aims to focus the discussion of metaphysics by introducing it via Aristotle s view that it is the science of being as being and delineating key types of being through the various chapters Figures covered briefly include Aristotle Heraclitus Protagoras Ockham Leibniz Locke Hume and Russell Neglected and important arguments by figures like Aquinas and Ockham are brought to light Each chapter is divided into short and easily readable sections including an introduction which raises a problem an account of key views criticisms of those views and a brief conclusion There are also recommended further readings at the end of each chapter which would be useful to anyone teaching a topic in the area
