

JANUARY ... DOES IT BRING YOU JOY?

- 1 January is the time for renewal on many fronts. It's the time of the year to re-evaluate everything. If something or someone doesn't bring you joy, it's pretty pointless carrying on with it. If we want the best, we must do our best. We must keep our family space safe and secure so that we are thriving as a people and as a nation. 5
- 2 In order to live their best lives, people are spreading themselves thinner and thinner with multiple streams of income. In the process we earn more but live less, we lose our focus of what is important.
- 3 With social media, keeping up with other Instagrammers are having a devastating effect on self-perception. Everything appears to be real perfect, but the fabric of our society is frazzled. Use January to take stock and start navigating new ways of doing things. Instead of multiple streams of sole sessions, travel more, and connect with people and places that bring you joy. 10

Mathematisation and Demathematisation ,2007-01-01 In this volume scholars from diverse strands of research have contributed their perspectives on a process of mathematisation which renders social economical or political relationships increasingly formal At the same time mathematical skills lose their importance as they become replaced by diverse technological tools a process of demathematisation takes place The computerization of financial transactions calculation of taxes and fees comparison of prices as well as orientation by means of GPS visualisation of complex data and electronic voting systems all these mathematical technologies increasingly penetrate the lifestyle of consumers What are the perils and promises of this development Who is in charge who is affected who is excluded A common concern of all the authors of this volume is an attempt to draw attention to issues related to the formatting power of mathematics and to its role as implicit

knowledge which results in a process of demathematisation This process having once received considerable attention is now threatened to be eclipsed by the proliferation of a discussion of school mathematics which shows a tendency of cutting off its own philosophical and political roots Taken together the contributions reveal a rather complex picture They draw attention to the importance of clarifying epistemological societal and ideological issues as a prerequisite for a discussion of curriculum
